Preface	xxix
Series Editor's Preface	xxxix

Chapter 1. Overview

Satinder Ahuja

1.1 Introduction	1
1.2 Sampling and Sample Preparation	2
1.3 Evaluations of Basic Physical Properties	2
1.4 Thermal Methods	3
1.5 General Principles of Spectroscopy and Spectroscopic Analysis	3
1.6 Near-Infrared Spectroscopy,	3
1.7 X-ray Diffraction and Fluorescence	4
1.8 Atomic Spectroscopy	4
1.9 Emission Spectroscopic Measurements	5
1.10 Nuclear Magnetic Resonance Spectroscopy	5
1.11 Mass Spectrometry	6
1.12 Theory of Separations,	6
1.13 Thin-Layer Chromatography,	7
1.14 Gas Chromatography	7
1.15 High-pressure Liquid Chromatography,	7
1.16 Supercritical Fluid Chromatography	8
1.17 Electromigration Methods,	8
1.18 Electrochemical Methods,	9
1.18.1 Potentiometry,	9
1.18.2 Voltammetry,	9
1.19 Hyphenated Methods	10
1.20 Unique Detectore	10
1.20.1 Optical sensors	11
1.20.2 Bioactivity detectors	11
1.20.3 Drug detectors	12

Contents

1.21	Problem Solving and Guidelines for Method Selection	13
	References	13
Chapter 2. Sampling and sample preparation		
	Satinder Ahuja and Diane Diehl	
2.1	Introduction	15
2.2	Sampling.	16
	2.2.1 Sample size reduction.	17
	2.2.2 Sampling error	17
2.3	Sample Preparation.	20
	2.3.1 Types of samples	23
2.4	Solid-Phase Extraction	31
2.5	Enhanced Sample Throughput	38
2.6	Summary and Conclusions	38
	References	38
	Further Reading.	40
	Review Questions	40
Chapter 3. Evaluation of basic physical properties		
	Neil Jespersen	
3.1	Introduction	41
3.2	Theory	42
	3.2.1 Melting and boiling points	42
	3.2.2 Viscosity.	44
	3.2.3 Density.	44
	3.2.4 Refractive index	45
	3.2.5 Conductivity.	45
3.3	Instrumentation	45
	3.3.1 Melting and boiling points	45
	3.3.2 Accuracy and precision	46
	3.3.3 Attributes of a good melting point determination . .	47
	3.3.4 The melting process	48
	3.3.5 Boiling points.	49
	3.3.6 Viscosity (rheology).	49
	3.3.7 Density.	53
	3.3.8 Refractive index	55
	3.3.9 Operation.	57
	3.3.10 Analysis using refractometry	57
	3.3.11 Conductivity.	59
	Review Questions	61

Contents

Chapter 4. Thermal analysis

Harry G. Brittain and Richard D. Bruce

4.1	Introduction	63
4.2	Determination of Melting Point.	64
4.3	Differential Thermal Analysis	68
4.3.1	Background	68
4.3.2	Methodology.	69
4.3.3	Applications	71
4.4	Differential Scanning Calorimetry	73
4.4.1	Background	73
4.4.2	Methodology.	74
4.4.3	Applications	76
4.5	Thermogravimetry	92
4.5.1	Background	92
4.5.2	Methodology.	92
4.5.3	Applications	93
4.6	Alternate Methods of Thermal Analysis.	105
4.6.1	Modulated differential scanning calorimetry (MDSC)	105
4.6.2	Evolved gas analysis (EGA)	106
4.6.3	Thermo-mechanical analysis (TMA)	106
4.6.4	Thermoptometry	106
4.6.5	Dielectric analysis.	106
	References	107
	Review Questions	109

Chapter 5. General principles of spectroscopy and spectroscopic analysis

Neil Jespersen

5.1	Introduction	111
5.1.1	Spectral regions	112
5.1.2	Spectra,	113
5.1.3	Origin of the spectra,	114
5.2	Spectroscopic Analysis.	119
5.2.1	Qualitative relationships.	119
5.2.2	Quantitative relationships	120
5.2.3	Single component analysis	123
5.2.4	Mixture analysis.	125
5.2.5	Method of standard additions	126
5.2.6	Photometric error.	128

Contents

5.3	Instrumentation	130
5.3.1	Sources of electromagnetic radiation.	130
5.3.2	Optical components	130
5.3.3	Detectors	133
5.3.4	Transmitting surfaces.	135
5.3.5	Sample handling.	137
5.4	Putting the Parts Together	138
5.4.1	Spectrometers for the visible region	138
5.4.2	Rapid spectroscopy	141
5.5	Statistics for Spectroscopy	145
5.5.1	Signal averaging.	145
5.5.2	Statistics for a calibration curve.	146
5.5.3	Signal-to-noise ratio	148
5.5.4	Limit of detection	148
5.5.5	Limit of quantitation	148
5.5.6	Sensitivity	149
	Review Questions	149

Chapter 6. Near-infrared spectroscopy

Emil W. Ciurczak		
6.1	Introduction	157
6.2	Basic Theory	159
6.3	Instrumentation	164
6.4	Math Treatments	166
6.5	Applications	171
	References	174
	Further Reading.	176
	Review Questions	176

Chapter 7. X-ray diffraction and x-ray fluorescence

Harry G. Brittain		
7.1	X-ray Diffraction	177
7.1.1	Introduction	177
7.1.2	Single-crystal x-ray diffraction	185
7.1.3	X-ray powder diffraction.	196
7.2	X-ray Fluorescence	210
7.2.1	Introduction.	210
7.2.2	Principles of x-ray fluorescence spectroscopy.	212
7.2.3	Experimental details.	215

Contents

7.2.4	Qualitative XRF analysis	217
7.2.5	Quantitative XRF analysis	218
	References	222
	Review Questions	226

Chapter 8. Atomic spectroscopy

Terence H. Risby		
8.1	Introduction	227
8.2	Theory	228
8.2.1	Atomic emission spectroscopy	228
8.2.2	Atomic absorption spectroscopy	229
8.2.3	Atomic fluorescence spectroscopy	230
8.3	Instrumentation	231
8.3.1	Atom reservoirs	232
8.3.2	Spectral sources	235
8.3.3	Monochromators	236
8.3.4	Read-out systems	237
8.4	General Considerations	237
8.4.1	Atomic emission spectroscopy	237
8.4.2	Atomic absorption spectroscopy	238
8.4.3	Atomic fluorescence spectroscopy	239
8.5	Analytical Method	240
8.5.1	Sample preparation	240
8.5.2	Selection of an analytical procedure	241
8.5.3	Quantification	243
8.5.4	Speciation	244
8.6	Conclusions	244
	Review Questions	245
	Further Reading	245

Chapter 9. Emission methods

C.H. Lochmiiller		
9.1	Introduction	247
9.2	Atomic Emission Spectrometry	248
9.3	X-ray Emission	250
9.3.1	Detectors for x-rays	252
9.4	Molecular Luminescence/Fluorescence	252
9.4.1	Statistical aspects of fluorescence decay	256
	Further reading	257
	Review Questions	257

Contents

Chapter 10. Nuclear magnetic resonance spectroscopy

Linda Lohr, Brian Marquez and Gary Martin

10.1	Introduction	259
10.2	Theory and Basic Principles	262
10.3	Instrumentation	266
10.3.1	Spectrometer overview	266
10.3.2	Quadrature detection	268
10.3.3	Probes	268
10.3.4	Accessories	269
10.4	NMR Methods for Liquids	272
10.4.1	1D Proton NMR methods	272
10.4.2	1D Carbon-NMR methods	277
10.4.3	Homonuclear 2D methods	279
10.4.4	Heteronuclear 2D methods	284
10.5	NMR of Solids Methods	294
10.5.1	Introduction to solid-state NMR	294
10.5.2	Basic principles of SSNMR	296
10.5.3	Common SSNMR experiments	301
10.5.4	Practical considerations for SSNMR	305
10.6	Applications	307
10.6.1	Overview	307
10.6.2	Case studies for liquids	307
10.6.3	Case studies for solids	309
	References	313
	Review Questions	316

Chapter 11. Mass spectrometry

David J. Burinsky

11.1	Introduction	319
11.2	Sample Introduction	322
11.3	Ionization Methods	323
11.3.1	Electron ionization (EI)	324
11.3.2	Chemical ionization (CI)	328
11.3.3	Atmospheric pressure chemical ionization (APCI)	329
11.3.4	Atmospheric pressure photoionization (APPI)	330
11.3.5	Field ionization (FI)	331
11.3.6	Electrospray ionization (ESI)	332
11.3.7	Matrix-assisted laser desorption ionization (MALDI)	334
11.3.8	Fast-atom bombardment (FAB) ionization	336

Contents

Further Reading	411
Review Questions	412
Chapter 13. Thin-layer chromatography	
Pamela M. Grillini	
13.1 Introduction	413
13.2 Theory and Basic Principles	413
13.3 Instruments and Their Use	416
13.4 Qualitative and Quantitative Applications	425
13.5 Special Topics	434
Acknowledgments	440
References	440
Review Questions	441
Chapter 14. Gas chromatography	
Nicholas H. Snow	
14.1 Introduction	443
14.1.1 Historical overview	444
14.1.2 Current status	444
14.1.3 Major bibliography	445
14.1.4 Online resources	446
14.2 Theory	447
14.2.1 Retention times	447
14.2.2 Gas flows	449
14.2.3 Band broadening	450
14.2.4 Resolution	451
14.3 Instrumentation	453
14.3.1 Overview	453
14.3.2 Gas handling and pneumatics	454
14.3.3 Inlets and sample injection	455
14.3.4 Column oven and columns	459
14.3.5 Detectors	463
14.4 Data Systems and Handling	468
14.4.1 Chart recorders and integrators	470
14.4.2 Computer-based data systems	471
14.4.3 Data analysis considerations	472
14.5 Applications	476
14.6 Looking Forward	478

Contents

References	480
Review Questions	482

Chapter 15. High-pressure liquid chromatography

Satinder Ahuja

15.1	Evolution of HPLC	486
15.1.1	High-pressure (or high-performance) liquid chromatography	486
15.2	Advantages Over GC, SFC, and CE	487
15.2.1	Advantages over GC	487
15.2.2	Advantages over SFC and CE	489
15.3	Separation Process	489
15.3.1	Eddy diffusion.	491
15.3.2	Mass transfer	492
15.3.3	Longitudinal diffusion.	492
15.4	Retention Parameters in HPLC.	493
15.4.1	Capacity factor	493
15.4.2	Retention time	494
15.4.3	Zero retention time.	494
15.4.4	Relating capacity factor to retention time	494
15.4.5	Retention volume	495
15.4.6	Peak width	496
15.4.7	Total number of theoretical plates.	496
15.4.8	Height equivalent of a theoretical plate.	497
15.5	Resolution and Retention Time	497
15.5.1	Separation factor and resolution	498
15.6	Equipment	499
15.6.1	Modular versus integrated HPLC systems.	499
15.6.2	Solvent delivery systems	500
15.6.3	Detectors	503
15.6.4	Data handling.	509
15.7	Modes of Separation in HPLC	509
15.7.1	Adsorption chromatography	510
15.7.2	Normal bonded phases	512
15.7.3	Reversed-phase chromatography	514
15.7.4	Ion-pair chromatography.	517
15.7.5	Ion-exchange chromatography.	519
15.7.6	Ion chromatography	521

Contents

15.8	Separation Mechanism in Reversed-phase HPLC,	525
15.8.1	Stationary phase effects	525
15.8.2	Relationship of RPLC to partition in octanol.	528
15.8.3	Impact of other physicochemical parameters on retention.	532
15.8.4	Solubility and retention in HPLC	536
15.9	Molecular Probes/Retention Index	537
15.10	Strategy of Separation.	540
15.10.1	Improving resolution.	541
15.11	Mobile-Phase Selection and Optimization	543
15.11.1	General considerations	543
15.12	Applications	552
15.12.1	A case study	553
	Conclusions	555
	References	555
	Review Questions	559

Chapter 16. Supercritical fluid chromatography

Mary Ellen P. McNally

16.1	Introduction	561
16.2	History of SFC	563
16.3	Basic Principles in SFC.	564
16.3.1	Parameter optimization.	566
16.3.2	Instrument requirements	567
16.4	Current Examples	568
16.4.1	Chiral separations.	568
16.4.2	Polymer separations	570
16.4.3	High throughput screening of pharmaceuticals	571
16.5	Conclusions	573
	References	574
	Review Questions:	574

Chapter 17. Electromigration methods: origins, principles, and applications

M. Jimidar

17.1	Introduction	575
17.2	Fundamentals of CE	577
17.2.1	Electrophoretic mobility (μ_i)	577
17.2.2	Electroosmotic mobility (μ_{eof})	580

Contents

17.2.3	Electrophoretic migration	584
17.2.4	Efficiency	586
17.2.5	Selectivity and resolution	593
17.3	Instrumentation	594
17.3.1	Sample injection	595
17.3.2	Detection	599
17.3.3	Sensitivity enhancement	602
17.3.4	Time-corrected (normalized) areas	604
17.3.5	Thermostatting	605
17.4	Methods and Modes in CE	606
17.4.1	Moving boundary CE	606
17.4.2	Steady-state capillary electrophoresis	607
17.4.3	Zone capillary electrophoresis	608
17.5	Conclusions	617
	References	618
	Review Questions	622

Chapter 18a. Potentiometry

Martin Telting-Diaz and Yu Qin

18a.1	Introduction	625
18a.2	General Principles	626
18a.3	Reference Electrodes	627
18a.3.1	Silver/silver chloride reference electrode	627
18a.3.2	Calomel electrode	629
18a.3.3	Liquid junction potential	630
18a.4	Indicator Electrodes	631
18a.4.1	Metal electrodes	631
18a.4.2	Glass membrane pH electrodes	633
18a.4.3	Ion-selective field effect transistors	635
18a.4.4	Solid-state electrodes	636
18a.4.5	Ion-selective polymer membranes	638
18a.4.6	Modified ion-selective electrodes	654
	References	656
	Review Questions	658

Chapter 18b. Voltammetry: Dynamic electrochemical techniques

Abul Hussam

18b.1	Introduction	661
18b.2	Tools of the Trade	662

Contents

19.3.8	Full (Repetitive) scan data collection vs. selected ion recording.	709
19.3.9	GC–MS Ex a m pleresidual solvents analysis. . . .	710
19.4	Liquid Chromatography–Mass Spectrometry	716
19.4.1	Historical perspective	716
19.4.2	Evolution of LC–MS interfaces	717
19.4.3	LC–MS compatible mobile phases	723
19.4.4	LC–MS accurate mass measurements	728
19.4.5	An LC–MS example.	728
19.5	Nuclear Magnetic Resonance Spectroscopy	731
19.5.1	Background.	731
19.6	Liquid chromatography–nuclear magnetic resonance.	732
19.6.1	Historical perspective	732
19.6.2	Basic instrumentation	734
19.6.3	Modes of operation	739
19.6.4	Continuous flow	739
19.6.5	Stop-flow.	740
19.6.6	Peak parking	742
19.6.7	Peak trapping	743
19.6.8	Liquid chromatography–nuclear magnetic resonance–mass spectroscopy	744
19.6.9	Recent advances	745
19.7	Conclusions	747
	References	748
	Review Questions	754

Chapter 20a. Optical sensors

	Enju Wang	
20a.1	Introduction	755
20a.2	Sensor Design	755
20a.3	Detection Methods.	756
20a.3.1	IR spectroscopy-based optical sensors.	759
20a.4	Sensing Principle of Sample Optical Sensors	761
20a.4.1	Oxygen (O ₂) gas sensors [3,31–35].	762
20a.4.2	pH sensors [3,4,36–40].	763
20a.4.3	Acidic or basic gas sensors using pH-sensitive dyes [41,42].	764
20a.4.4	Cation sensors [3,4,43–51].	765
20a.4.5	Anion sensing [3,4,52–57].	768
20a.4.6	Biosensors [58–60].	770

Contents

Review Questions	775
 Chapter 20b. Bioactivity detectors	
Sue M. Ford	
20b.1 Background	777
20b.1.1 Needs for bioactivity detection	777
20b.2 Methods	777
20b.2.1 Traditional bioactivity methods	777
20b.2.2 Methods and instruments based on molecular recognition	778
20b.2.3 Methods and instruments based on nucleotide analysis	779
20b.2.4 Methods and instruments based on chemical and physical analysis	781
20b.3 Bioweapons	783
20b.3.1 Characteristics of bioweapons	783
20b.3.2 Detect-to-warn, detect-to-treat	784
20b.3.3 Stand-off detectors, point detectors, light scattering	785
References	786
Review Questions	788
 Chapter 20c. Drug detectors	
Sue M. Ford	
20c.1 Drug Detection in the Field	789
20c.1.1 Background considerations	789
20c.1.2 Desirable characteristics of field detectors	789
20c.1.3 Sampling	790
20c.1.4 Background contamination	790
20c.2 Instrumentation	791
20c.2.1 Bulk detection	791
20c.2.2 Trace detection	791
References	796
Review Questions	798

Chapter 21. Problem solving and guidelines for method selection

Alan H. Ullman and Douglas E. Raynie

21.1	The Bulging Drums [1]	799
21.2	Student Exercise	809
21.3	The Analytical Approach	812
21.3.1	Defining the problem and gathering information	812
21.3.2	Formulating a hypothesis	815
21.3.3	Selecting an analytical approach	815
21.3.4	Implementing the analysis	820
21.3.5	Reducing the data and interpreting the results	820
21.3.6	Problem solved? Not until you report the results!	821
21.3.7	Summary	821
21.4	Example Problems	822
21.4.1	Problem 1: The cruddy crude coconut oil	822
21.4.2	Problem 2: An off-flavor in cookies [3]	827
21.4.3	Problem 3: The fish kill mystery [4]	832
21.4.4	Problem 4: The unknown pesticide [5]	836
21.4.5	Problem 5: The mummy's make-up [6]	839
21.4.6	Problem 6: The polymer production plant [8]	844
