<b>Foreword</b>	<b>xxvii</b>

## **PART I: INTRODUCTION TO FLOW ANALYSIS**

### **1. Flow Injection Analysis: Its Origins and Progress**

Elo Harald Hansen

1. The Conception of FIA	3
2. The Infancy of FIA	7
3. Placing FIA into Context	9
4. The Early Years of FIA	11
5. The Dissemination of FIA: The Human Factor	15
6. Miniaturisation of FIA	15
7. Concluding Remarks	18
References	21

### **2. From Beaker to Programmable Microfluidics**

Jaromir Růžička

1. Introduction	23
2. Sequential Injection and Programmable Flow	26
3. Miniaturization	28
4. Mixing and Dispersion	28
5. Mixing by Diffusion and Reynolds Number	35
6. $\mu$ SI and Lab-on-Valve Design	36
7. Methods	37
8. Conclusions	43
Acknowledgment	44
References	44

<b>3. Theoretical Basis of Flow Injection Analysis</b>	<b>47</b>
Spas D. Kolev	
1. Introduction	47
2. Mass Transfer in FIA Systems	48
3. Chemical Kinetic Phenomena	66
4. Sensing Mechanism	71
Abbreviations and Nomenclature	74
References	75
<b>4. Principles of Flow Injection Analysis</b>	<b>81</b>
Ian D. McKelvie	
1. Introduction	
2. Sample Dispersion in Flow Injection and Sequential Injection Analysis Systems	84
3. Components of Flow Injection and Sequential Injection Analysis Systems	87
4. Operational Modes of FIA and Related Techniques	98
5. Conclusion	105
Abbreviations	105
References	106
<b>5. Bibliometrics</b>	<b>111</b>
Stuart Chalk	
1. Introduction	111
2. Analytes	112
3. Application Areas	114
4. Detection Techniques	118
5. Other Interesting Statistics	121
6. Future Trends	121
Abbreviations	124
References	125
<b>PART II: ON-LINE SAMPLE MANIPULATION</b>	
<b>6. On-Line Sample Pretreatment: Dissolution and Digestion</b>	<b>129</b>
V. Cerda and J.M. Estela	
1. Introduction	129
2. Dissolution	130
3. Digestion	135
Abbreviations and Definitions	154
References	155

4. Comparison of Sequential Injection Chromatography and High Performance Liquid Chromatography	278
5. Other Chromatographic Approaches	280
6. Future Trends	281
Abbreviations	284
References	284
<b>11. Flow Injection Analysis—Capillary Electrophoresis</b>	<b>287</b>
Pavel Kubari and Peter C. Hauser	
1. Introduction	287
2. Fundamentals of Capillary Electrophoresis	288
3. On-Line Coupling of FIA and CE	291
4. Electrokinetically Pumped Flow Analysis	302
5. Conclusions	305
Abbreviations	305
Acknowledgments	306
References	306
<b>PART III: DETECTION</b>	
<b>12. Photometry</b>	<b>311</b>
Wolfgang Frenzel and Ian D. McKelvie	
1. Introduction	311
2. Fundamentals of Spectrophotometric Measurements	314
3. Instrumental Aspects of Flow-Through Spectrophotometry	317
4. Background Absorbance Correction	332
5. Refractive Index (Schlieren) Effects	334
6. Conclusions and Outlook	338
Abbreviations	340
References	340
<b>13. Luminescence</b>	<b>343</b>
Paul S. Francis and Conor F. Hogan	
1. Introduction	343
2. Photoluminescence	344
3. Chemiluminescence	349
4. Electrochemiluminescence	358
5. Future Directions	367
Abbreviations	369
References	370
<b>14. Atomic Spectroscopic Detection</b>	<b>375</b>
Elo Harald Hansen and Manuel Miro	
1. Introduction	375
2. Interfacing the Flow Network with Detection Devices	378
3. Flow Systems as Front-End Vehicles for On-Line Processing of Aqueous Samples	379

4. Flow Systems as Front-End Vehicles for On-Line Processing of Solid Samples	397
5. Hyphenation with Atomic Spectroscopic Detectors	401
Abbreviations	402
References	403
<b>15. Vibrational Spectrometry</b>	<b>407</b>
Sergio Armenta, Salvador Garrigues and Miguel de la Guardia	
1. A Short Note on the Evolution of Flow Injection Analysis in Recent Years	407
2. Vibrational Techniques as Detectors in Flow Injection Analysis	408
3. Scientometric Evolution of Vibrational Spectrometry in Flow Injection Analysis	408
4. Objectives	409
5. Infrared Spectrometry	410
6. Raman Spectrometry	430
7. Concluding Remarks and Outlook	435
Abbreviations	435
Acknowledgments	436
References	436
<b>16. Electrochemical Detection</b>	<b>441</b>
Ari Ivaska	
1. Introduction	441
2. Detector Design	444
3. Conductometric Measurements	444
4. Potentiometric Measurements	447
5. Voltammetric and Amperometric Measurements	450
6. Coulometric Measurements	455
7. Conclusions	457
Acknowledgments	457
References	458
<b>17. Miscellaneous Detection Systems</b>	<b>461</b>
Kate Grudpan and Jaroon Jakmunee	
1. Introduction	461
2. Conductometric Detectors	463
3. Miscellaneous Non-Spectrophotometric, Optical Detection Systems	464
4. Radiometric Detection	474
5. Thermometric and Enthalpimetric Detection	476
6. Dynamic Surface Tension Detector	477
7. Mass Spectrometry	479
8. Nuclear Magnetic Resonance (NMR)	480
9. Piezoelectric Detection	481
10. X-Ray Fluorescence	485
11. Conclusion	505
Abbreviations	505
References	506

## PART IV: APPLICATIONS OF FLOW INJECTION ANALYSIS

<b>18. Food, Beverages and Agricultural Applications</b>	<b>513</b>
Ildikó V. Toth, Marcela A. Segundo and Antonio O.S.S. Rangel	
1. Introduction	513
2. Applications: Beverages	514
3. Applications: Plants and Vegetables	545
4. Applications: Milk and Dairy Products	546
5. Applications: Meat and Fish products	547
6. Miscellaneous Food Products	548
Abbreviations	548
References	549
<b>19. Life Sciences Applications</b>	<b>559</b>
Jianhua Wang and Xuwei Chen	
1. Introduction	559
2. Deoxyribonucleic Acid (DNA) Assays	560
3. Assays of Proteins, Peptides and Amino Acids	566
4. Immunoassays	575
5. Enzymatic Assays	581
6. Cellular Analysis	585
7. Perspectives	586
Abbreviations	587
References	588
<b>20. Pharmaceutical Applications</b>	<b>591</b>
Miroslav Polášek	
1. Introduction	591
2. Automated Analytical Flow Methods in Pharmaceutical Research	594
3. Automated Analytical Flow Methods in Pharmaceutical Production and Drug Quality Control	599
Abbreviations	613
References	613
<b>21. Industrial and Process Analysis Applications</b>	<b>617</b>
Celio Pasquini and Márcio V. Rebouças	
1. Introduction	617
2. The Advantages and Weakness of Flow Analysis Applied to Industry	619
3. Process Analysers Based on Flow Systems	627
4. Selected Applications of Flow Analysis to Industrial and Process Analysis	629
5. Conclusion	635
Abbreviations	636
References	637

<b>22. Environmental Applications: Atmospheric Trace Gas Analyses</b>	<b>639</b>
Kei Toda and Purnendu K. Dasgupta	
1. Introduction	640
2. Collection of Trace Gases	640
3. Integration of a Gas Collector into a Flow Analysis System	650
4. Flow System Miniaturization for Atmospheric Analysis	656
5. Illustrative Examples	661
6. Applications to Breath Analysis	673
7. Ancillary Systems for Field Monitoring	675
8. Conclusions	680
Acknowledgments	680
References	681
<b>23. Environmental Applications: Waters, Sediments and Soils</b>	<b>685</b>
Paul J. Worsfold, Ian D. McKelvie and Grady Hanrahan	
1. Challenges of Environmental Analysis	686
2. Instrumentation and Modes of Application	692
3. Range of Sample Types	698
4. Applications	705
5. Future Trends	751
Abbreviations and Definitions	752
References	754
<b>Subject Index</b>	<b>761</b>
<b>See Color Plate Section at the End of This Book</b>
