

CONTENTS

<i>Series Editors Preface</i>	xv
<i>Preface</i>	xvii
<i>Abbreviations</i>	xix
1. Origins of Green Analytical Chemistry	1
1.1. The Ecological Paradigm	2
1.2. The Environmental Opportunities for Analytical Chemistry	4
1.3. The Bad Conscience of Consumers of Reagents and Waste Generation	5
1.4. Clean Analytical Methods	7
1.5. Green Chemistry	10
1.6. The Integrated Approach to Analytical Chemistry	13
1.7. The State-of-the-Art of Green Analytical Chemistry	17
References	21
2. The Basis of a Greener Analytical Chemistry	25
2.1. The Side Effects of Reagents and Solvents	28
2.2. The Energy Costs of Analytical Chemistry	30
2.3. Waste Generation and its Associated Risks	33
2.4. Strategies for Greening Analytical Chemistry	36
References	38
3. A Green Evaluation of Existing Analytical Methods	39
3.1. Toxicological Data of Reagents	39
3.2. Evaluation of the Contact of Operators with Reagents and Wastes	46
3.3. Evaluation of Energy Consumption	50
3.4. Evaluation of Reagent Consumption and Waste Generation	52
3.5. Compatibility of Green Chemistry Principles and the Main Analytical Figures of Merit	53
References	56

4. Avoiding Sample Treatments	59
4.1. Remote Sensing	60
4.2. Noninvasive Measurements on Blisters, Bottles, or Vials	66
4.3. Direct Analysis Without Sample Damage	67
4.4. Direct Methods with Sample Damage	76
References	83
5. Greening Sample Treatments	87
5.1. Solid Sample Extraction Techniques	88
5.2. Extraction of Liquid Samples	95
5.3. Extraction of Volatile Analytes; Direct Thermal Desorption	111
5.4. Concluding Remarks	115
References	115
6. Multianalyte Determination Versus One-at-a-Time Methodologies	121
6.1. Multianalyte Determination in Spectroscopy	122
6.2. Multianalyte Determination in MS	126
6.3. Multicomponent Determination in Chromatography and CE	132
6.4. MS as Detector in Separation Systems	150
References	152
7. Downsizing the Methods	157
7.1. Minimization of the Reagents Consumed Through Automation	157
7.2. Miniaturization of the Sample Preparation Systems	160
7.3. μ TAS or "Lab-on-a-chip"	163
7.4. Electrochemical Detection	168
7.5. Spectroscopic Detection	172
7.6. UPLC, Micro-, and Nano-LC	175
References	179

8. Moving from Wastes to Clean Wastes	185
8.1. The Problem of Analytical Wastes	185
8.2. Replacement of Toxic Reagents	186
8.3. Use of Alternative Solvents	187
8.4. On-line Decontamination of Wastes	189
8.5. Recycling of Wastes	200
References	202
9. Ideas for a Change of Mentality and Practices	207
9.1. Introducing Sustainable Parameters in the Evaluation of Methods	208
9.2. Economic Balances of Sustainability	210
9.3. Downsizing the Scale of Problems	212
9.4. Creating New Relationships Between Samples and Operators	214
References	217
10. Practical Consequences of Green Analytical Chemistry	219
10.1. The Use of Green Terms	220
10.2. The Need of Classification Criteria for Analytical Methods Concerning Sustainability	222
10.3. Practices to be Avoided in Analytical Laboratories	224
10.4. Practices to be Improved in Analytical Laboratories	226
10.5. Greening the Analytical Publications	227
10.6. Teaching Green Analytical Chemistry	230
References	232
Subject Index	233
