

CONTENTS

1. INTRODUCTION	
1.1 Slurries in Everyday Life	1
1.2 Goals of This Endeavour	2
1.3 Organization of the Contents	3
1.4 Difficulties with the Subject	4
1.5 Operations and Problems Involving Slurries	5
1.6 Developing Competence for Solving Dispersion Problems	15
2. PARTICLE STRUCTURE	
2.1 Levels of Particle Structure	17
2.2 Surface Contours	25
2.3 Heterogeneous Solids	26
2.4 Particle Volume Distribution	28
2.5 The Attrition Spectrum	35
2.6 Slurry Concentration Relationships	38
3. PARTICLE PHYSICS	
3.1 Two-body Interactions	39
3.2 Motion in Response to External Fields	54
3.3 Effects of the Surrounding Liquid	61
4. SURFACE CHEMISTRY	
4.1 Chemical Classes of Solid Surfaces	71
4.2 Chemical Classes of Liquids	74
4.3 Chemical Classes of NonSurfactant Solutes	77
4.4 Chemical Classes of Surfactants	79
4.5 Discussion of Specific Classes of Surfactants	83
4.6 Nonionics	88
4.7 Cationics	92
4.8 Anionics	94
4.9 Zwitterionics (Amphoterics)	99
4.10 Polymers	100
4.11 Other Ways to Change the Surface	106
4.12 Complications for Industrial Materials	107

5. SURFACE THERMODYNAMICS	
5.1 Elementary Thermodynamics	111
5.2 Energy Changes Due to Creating New Surface	117
5.3 Interface Motion to Balance Surface Forces	122
5.4 Energy Changes Due to Curvature	128
5.5 Adsorption on a Surface	131
6. AGGLOMERATION	
6.1 Coagulation and Flocculation	137
6.2 Micelle Formation	142
6.3 Polymer Chain Interactions	147
7. DISPERSANT SELECTION	
7.1 The Three Stages of the Dispersion Process	151
7.2 Getting the Big Picture	153
7.3 Laboratory Examination of Dispersions	156
7.4 Selecting Dispersants for Scouting Tests	161
7.5 Further Evaluation for Industrial Applications	167
8. SLURRY TESTS AND ANALYSES	
8.1 Relatively Simple Techniques	171
8.2 Rheology	180
8.3 Surface Charge Measurement	187
8.4 Spectroscopic Methods	189
8.5 Nuclear Spin and Scattering Methods	191
8.6 Thermal and Material Adsorption Methods	192
8.7 Electron and Ion Beam Techniques	193
