

CONTENTS

PREFACE	v
CHAPTER I: THEORY	1
A. Electromagnetic Radiation	1
B. Molecular Energy	2
C. Degrees of Freedom and Molecular Motions	2
D. Fundamental Vibrations	3
E. Infrared Spectral Regions	3
F. Additional Theoretical Considerations	5
CHAPTER II: INSTRUMENTATION	8
A. Introduction	8
B. Infrared Sources	8
C. Infrared Monochromators	9
D. Infrared Detectors	10
E. Double-beam Spectrophotometers and the Optical-Null Method	10
CHAPTER III: EXPERIMENTAL TECHNIQUES	11
A. Infrared Absorption Cells and Crystals	11
1. Sealed Cells	11
2. Demountable Cells	11
3. Variable Thickness Cells	11
4. Microcells	11
5. Gas Cells	11
6. High and Low Temperature Cells	12
7. Flow-Thru Cells	12
8. Determination of Cell Thickness	12
9. Maintenance of Crystals and Cells	13
B. Sampling Techniques	13
1. Solid Phase Techniques	13
(a) Free and Cast Films	13
(b) Mulls and Pellets	14
2. Liquid Phase Techniques	16
3. Gas Phase Technique	16
C. Surface Techniques	17
1. Attenuated Total Reflectance (ATR) and Multiple Internal Reflectance (MIR)	17
2. Specular Reflectance (Double Transmission)	18

CONTENTS

D. Microscale and Trace Analysis	18
1. Gases	18
2. Liquids	18
3. Solids	19
4. Compensation Techniques	19
 CHAPTER IV: QUALITATIVE ANALYSIS	 20
A. Introduction	20
B. Preliminary Studies	20
C. Techniques of Interpretation	21
1. Sight Recognition and Direct Comparison	21
2. Negative Interpretation	21
3. Positive Interpretation	22
D. Additional Considerations	22
1. Sample Purity	22
2. Limits of Detectability	22
3. Indistinguishable Spectra	23
E. Spectral Interpretation	23
1. Application of Negative Interpretation	23
2. Application of Positive Interpretation	24
3. Combined Application of Positive and Negative Interpretation	25
4. Spectral Interpretation of Polymers	25
(a) Polyvinyl Acetate	25
(b) O-Phthalic Alkyds and Polyesters	26
(c) Melamine-, Benzoguanamine-, and Urea-Formaldehyde Resins	28
(d) Polyamides	29
(e) Silicones	29
(f) Fatty Acids	32
(g) Epoxies	32
(h) Polyvinyl Chloride	32
(i) Polyglycols	32
(j) Polymer Classification Scheme	32
5. Spectral Interpretation of Non-Polymeric Materials	32
(a) Inorganic Materials	32
(b) Liquids	36
(c) Gases	36
F. Summary	36
 CHAPTER V: QUANTITATIVE ANALYSIS	 52
A. Introduction	52
B. The Basis for Quantitative Analysis- The Absorption Law	52
C. The Absorbance, A	53
1. "Tangent-Line" Technique	54
2. "True Base-Line" Technique	54
3. Integrated Intensities	55
D. Special Considerations for Quantitative Analysis	55
1. Selection of the Analytical Band	55
2. Optimum Absorbance Range	55
3. Sources of Error—Deviations from the Absorption Law	56
(a) Instrumental	56
(b) Chemical	57

CONTENTS

E. Quantitative Infrared Methods	58
1. Direct Calculation	58
2. Working Curve Method	58
3. Standard Addition Method	59
4. Absorbance Ratio Method	59
5. Internal Standard Method	60
6. Coincident Band Method	61
7. Quantitative Analysis Without the Use of Standards	62
8. Internal Reflection Method	62
 CHAPTER VI: SELECTED APPLICATIONS	 63
A. Physical Characteristics of Polymers	63
1. Chain Orientation Studies	63
2. Crystallinity	63
B. Chemical Characteristics of Polymers	63
1. Quantitation of Resin Components	63
2. Functional Group Analysis	64
3. Curing Rate and Oxidation Studies	64
4. Characterization of Unsaturation	65
C. Reaction Infrared Spectroscopy	65
1. Pyrolysis of Polymers	65
2. Functional Group Verification	65
D. Inorganic Materials	65
 CHAPTER VII: BIBLIOGRAPHY	 66
A. General	66
B. Theory	66
C. Instrumentation	67
D. Experimental Techniques	67
E. Qualitative Analysis	70
F. Quantitative Analysis	73
G. Selected Applications	74
 CHAPTER VIII: CATALOG OF SPECTRA	 83
A. Instrumentation	83
B. Experimental	83
1. Film Formers and Non-Crystalline Solids	83
2. Liquids	83
3. Inorganic Pigments, Extenders and Other Crystalline Materials	83
4. Gases	84
C. Index to Spectra	84
 SPECTRA	 87

"Infrared Spectroscopy, Its Use in the Coatings Industry" was presented in abstract form at the 46th Annual Meeting of the Federation of Societies for Paint Technology, in New York, N. Y., October 24, 1968.
