

CONTENTS

6. Excitation of Spectra	1
6.1 Introduction	2
6.2 General Characteristics and Electrical Parameters of Arcs and Sparks	6
6.3 Spectral-Line Intensity and Source Parameters	106
6.4 Special Excitation Sources	180
References	229
7. Flame Spectrometry	255
7.1 Flame Spectrometry-General Considerations	256
7.2 Flame Emission Spectrometry	289
7.3 Flame Absorption Spectrometry	334
7.4 Flame Fluorescence Spectrometry	357
7.5 A Comparison of Flame Emission, Flame Absorption, and Flame Fluorescence Spectrometry	376
List of Symbols, Definitions, and Units	381
References	386
8. Qualitative and Semiquantitative Analysis	395
8.1 Introduction	396
8.2 Qualitative Analysis	396
8.3 Semiquantitative Analysis-Concept	422
8.4 Future Trends	445
References	448
9. Quantitative Analysis	451
9.1 Introduction	452
9.2 General Advantages and Disadvantages	453
9.3 General Historical Development	455
9.4 Understanding the Spectrograph	459
9.5 Understanding the Arc	464
9.6 Selection of the Proper Excitation Mode	474
9.7 Selection of the Method	487
9.8 Methodology for Liquids	498
9.9 Methodology for Powders	505
9.10 Methodology for Solid Materials	513
9.11 Controlled Atmospheres	520
9.12 Methodology for Gases	524
References	525
