

CONTENTS

PART 1. THEORETICAL PRINCIPLES

1. Introduction	3
2. Atomization	7
3. Characteristics of Flames	14
4. Excitation of Metallic Spectra	31
5. The Use of Organic Solvents	51

PART 2. INSTRUMENTATION AND TECHNIQUE

6. The Flame Photometer	67
7. Interferences	97
8. Evaluation Methods	110
9. Selection of Optimal Working Conditions	123
10. Absorption Flame Photometry	139

PART 3. FLAME PHOTOMETRY APPLIED TO THE INDIVIDUAL ELEMENTS

11. Introduction to the Determination of the Elements	145
12. The Alkali Metals	153
13. Elements of Periodic Groups I-B and II-B	179
14. Magnesium and the Alkaline Earth Metals	188
15. Scandium, Yttrium, Lanthanum, and the Rare Earths	214
16. Boron, Aluminum, Indium, Gallium, and Thallium	226
17. Elements of Periodic Group IV	238
18. Chromium, Molybdenum, Vanadium, and Manganese	240
19. Iron, Cobalt, Nickel, and the Platinum Metals	250
20. The Nonmetals	261

PART 4. APPLICATIONS

21. Clinical Applications	271
22. Soils, Plant Materials, and Plant Nutrients	285
23. Cement and Glass	292

Appendix A. Preparation of Stock Solutions	295
--	-----

B. Analytical Factors	298
-----------------------	-----

C. Definition and Relation of Concentration Units and Radiant Energy	299
--	-----

Bibliography	301
--------------	-----

Index	341
-------	-----
