

CONTENTS

CHAPTER I-Special features of the ultramicromethod of chemical analysis	1
CHAPTER II-General apparatus	11
The microscope	11
Micromanipulators	13
Piston attachment for the micropipette	14
The moist chamber and apparatus holder	16
Microapparatus	17
Some ancillary apparatus	21
Setting up the apparatus	25
On techniques of working with small volumes	29
CHAPTER III-Qualitative analysis	31
Observation of the colour of solutions	31
The formation and observation of precipitates	42
Microcrystalline reactions	51
Systematic qualitative analysis	52
CHAPTER IV-Methods of separation	60
Separation by precipitation	60
Separation by electrolysis	60
Separation on ion-exchange resins	68
Separation by extraction	72
Separation by sublimation and distillation	75
CHAPTER V-The qualitative analysis of various samples	79
The preparation of the sample for analysis	79
The dissolution of microsamples of a substance	87
Examples of the analysis of alloys and metals	91
CHAPTER VI-Quantitative analysis	96
Balances and weighing	96
Volumetric methods	109
Colorimetric methods	131
CONCLUSION-The future development of inorganic ultramicro-analysis	141
