

CONTENTS

Part I Theoretical

1. The Structure of the Atom	3
2. The Formation of Ions and Molecules	12
3. The Relationship of Structure and Properties	20
4. Crystals, Liquids, and Gases	29
5. Chemical Reactions	35
6. Solutions	49
7. Colloids	65
8. Chemical Equilibrium	70
9. The Theory of Ionization	83
10. Ionic Equilibrium	94
11. Hydrolysis	115
12. The Solubility Product Principle	137
13. Complex Ions	160
14. Amphoteric Substances	183
15. Theory of Oxidation-Reduction	192

Part II Reference

16. Ionization Constants, Solubility Products, and Other Tables	211
17. Properties of Inorganic Compounds	218
18. Mathematical Operations	232
19. Cations of Group I: Properties of the Metals and Ions	243
20. Cations of Group II: Properties of the Metals and Ions	251
21. Cations of Group III: Properties of the Metals and Ions	272
22. Cations of Group IV: Properties of the Metals and Ions	294
23. Cations of Group V: Properties of the Metals and Ions	300
24. Anions of Group I: Properties of the Acids and Anions	306
25. Anions of Group II: Properties of the Acids and Anions	319
26. Anions of Group III: Properties of the Acids and Anions	328

Part III Experimental

27. Introduction to Laboratory Work	335
28. Preliminary Experiments	343
29. Analysis of the Cations	362
30. Analysis of Group I	366
31. Analysis of Group II	371

32. Analysis of Group III	385
33. Analysis of Group IV	401
34. Analysis of Group V	407
35. Analysis of a General Unknown	412
36. Analysis of an Alloy	423
37. Special Tests for the Cations	430
38. Analysis of the Anions	438
39. Tests for the Anions-Discussion	446
40. Tests for the Anions-Experimental	455
41. Analysis of Dry Solids	466
Appendix	477
Index	485
