

CONTENTS

CHAPTER I. GENERAL DISCUSSION	1
1. Classification of analytical techniques based on the amount of substance taken for analysis	1
2. Ultramicroanalysis : scope of application	5
3. Ultramicroanalysis: distinctive features	8
CHAPTER II. PRINCIPAL TECHNIQUES OF OPERATION	18
1. Sampling techniques	18
2. Addition and measurement of solutions	21
3. Reactions on fibers, paper and gelatin	27
4. Microcrystalloscopic tests	33
5. Reactions in capillary test tubes and cones	35
6. Tests in sealed capillaries	44
7. Reactions involving the use of gaseous reagents	47
8. Mixing and shaking of solutions	50
9. The heating, evaporating and igniting procedures	51
10. Isolating a precipitate from solution	55
11. The washing of vessels	62
12. Electrolysis	63
13. Extraction	65
14. Chromatography	67
15. Microscopic determination of size	70
CHAPTER III. GRAVIMETRIC ANALYSIS	73
1. Balances and weighing procedures	73
2. Balances using thread displacement	74
3. Balances based on torsion	82
4. Helical (spring) balances	88
5. Weighing pans and loops	89
6. Balance calibration	91
7. Weighing errors	97
8. Gravimetric determinations	98
9. Dry residue determination	98
10. Ash determination	99
11. Lead, silver and mercury determination	100
12. Determination of relative density of liquids	100
13. Density determination of solids	102

CHAPTER IV. VOLUMETRIC ANALYSIS	108
1. Volumetric analysis: equipment and techniques	110
2. Mercury-seal burettes	110
3. Air-seal burettes	117
4. Hydrostatic burettes	119
5. Uncalibrated burettes	123
6. Pipettes	126
7. Volumetric flasks	133
8. Titration vessels	135
9. Calibrating measuring instruments	138
10. Errors of titration	149
11. Volumetric determination	160
CHAPTER V. PHYSICOCHEMICAL METHODS OF ANALYSIS	173
1. Potentiometric determinations	173
2. Colorimetric determinations	178
3. Spot colorimetry	179
4. The standard series method	181
5. Spectrophotometry	185
6. Photocolorimetry	188
7. Photographic method	195
CHAPTER VI. OTHER ANALYTICAL TECHNIQUES	197
1. Determinations on paper and gelatin films	197
2. Kinetic methods of analysis	201
3. Determinations based on the volume of precipitate	203
CHAPTER VII. GAS ANALYSIS	205
