

CONTENTS

Chapter 1 Introduction	1
A. History of ion exchange	1
B. Synthesis of ion-exchange resins	4
C. List of ion-exchange resins	14
REFERENCES	15
Chapter 2 General Properties of Ion-exchange Resins	16
A. Stability	16
B. Equivalence of exchange reactions	20
C. Reversibility of ion-exchange reactions	20
D. Conversion of the resin from one form to another	20
E. Titration curves and capacity	22
F. Crosslinking and swelling	24
G. Donnan equilibrium	27
H. Absorption of nonelectrolytes	30
I. Catalysis by ion-exchange resins	33
J. Ion-exchange resins as desiccants	33
REFERENCES	34
Chapter 3 Ion-exchange equilibrium	36
A. The equilibrium distribution	36
B. Thermodynamics of ion exchange	38
C. Ionic selectivity	43
D. Experimental methods	51
REFERENCES	53
Chapter 4 Ion-exchange Kinetics	54
A. The rate-controlling step	54
B. Experimental methods	54
C. Conditions that influence the rate	58
REFERENCES	61

Chapter 5 Nonchromatographic Applications	63
A. Preparation, care, and use of an ion-exchange column	63
B. Preparation and purification of reagents	66
C. Removal of interfering constituents	70
D. Determination of total salt	77
E. Dissolving insoluble salts	79
F. Concentrating trace constituents	82
REFERENCES	86
Chapter 6 Theory of Ion-exchange Chromatography	88
A. Subdivisions of ion-exchange chromatography	88
B. Importance of theoretical considerations	92
C. Plate theory of ion-exchange elution chromatography	93
D. Mass-transfer or continuous-flow plate theory	122
E. Tracer-pulse and concentration-pulse methods	127
REFERENCES	131
Chapter 7 Technique of Ion-exchange Chromatography	132
A. Preparation of the column	132
B. Performing the elution	134
C. Analyzing the effluent	136
REFERENCES	139
Chapter 8 Applications of Ion-exchange Chromatography	140
A. Separation of inorganic ions	140
B. Separation of organic compounds	162
REFERENCES	172
Chapter 9 Salting-out Chromatography and Related Methods	175
A. Ion exclusion	175
B. Separations by elution with water or dilute aqueous buffer solutions	177
C. Salting-out elution chromatography	178
D. Elution chromatography with mixed solvents	186
E. Comparison with gas-liquid chromatography	191
F. Frontal liquid-resin chromatography	192
REFERENCES	195

Chapter 10 Less Common Ion Exchangers	197
A. Porous resins	197
B. Resins with interpenetrating polymer networks	203
C. Ion-retardation resins	204
D. Ion-exchange membranes	206
E. Inorganic ion exchangers	214
F. Liquid ion exchangers	226
G. Ion-exchange paper	236
H. Ion-exchange materials from carbohydrates	248
I. Thin-layer chromatography	253
J. Chromatographic resolution of racemic substances	254
REFERENCES	258
Chapter 11 Study of Complex Ions	262
A. Separation of kinetically stable complexes	262
B. Measurement of stability constants by ion exchange	263
C. Anionic chloride complexes	271
D. Metal-ammonia and Metal-amine complexes	272
REFERENCES	274
APPENDIX. List of symbols	275
Table A.1	277
NAME INDEX	279
SUBJECT INDEX	289
OTHER TITLES IN THE SERIES	295
