

CONTENTS

Chapter I. Chromatographic Processes	1
References Chapter I	5
Chapter II. Fundamentals of Chromatography	6
A. Retention	6
B. Linear Flow Rate, Porosity, Permeability	9
C. Band Broadening	12
D. Resolution	14
E. Dependence of Band Broadening on Flow Rate	17
F. Band Broadening and Particle Size	21
G. Extra-Column Band Broadening	24
H. Optimum Analysis Conditions and Analysis Time	25
I. Selection of a Suitable Column	29
References Chapter II	30
Chapter III. Equipment for HPLC	32
A. Solvent Reservoir-Degassing of the Eluent	33
B. Pumps	34
C. Damping of the Pulsations	38
D. Sample Introduction	38
E. The Column	42
F. Thermostating	51
G. Measurement of the Flow Rate	52
H. Fraction Collectors	52
I. Recorders	53
J. Instrumentation for Gradient Elution	53
K. Safety Measures	56
References Chapter III	57
Chapter IV. Detectors	58
A. UV Detectors	59
B. Differential Refractometer	63
C. Microadsorption Detector	67
D. Transport Detector (Flame Ionization Detector)	68
E. Fluorescence Detector	70
F. Other Detectors	71
G. Comparison of the Important Detectors	76
H. Reaction Detectors	77
References Chapter IV	79

Chapter V. Stationary Phases	81
A. Packing Materials for Adsorption and Partition Chromatography	82
B. Chemically Modified Supports	87
C. Ion Exchangers	92
D. Stationary Phases for Exclusion Chromatography	93
References Chapter V	94
Chapter VI. Adsorption Chromatography	96
<i>I. Polar Stationary Phases</i>	<i>96</i>
A. General	96
B. Stationary Phases	99
C. Effect of Water on Separations	101
D. Effect of Eluent on Separation	109
E. Effect of Sample Structure	118
<i>II. Nonpolar Stationary Phases</i>	<i>120</i>
A. General	120
B. Reversed Phase Properties	121
C. Effect of Solvent on Separation	125
D. Effect of Sample Structure	128
<i>III. The General Elution Problem</i>	<i>132</i>
A. Pressure or Flow Programming	133
B. Temperature Programming	135
C. Programming of the Stationary Phase	140
D. Gradient Elution. Programming of the Eluent Composition	142
<i>IV. Applications of Adsorption Chromatography</i>	<i>150</i>
A. On Polar Stationary Phases	151
B. On Nonpolar Stationary Phases	152
C. Separations on Polyamide	159
References Chapter VI	159
Chapter VII. Partition Chromatography	164
A. Introduction	164
B. Supports and Liquid Phases	166
C. Properties of the Column	176
D. Applications	181
E. Ion-pair Chromatography	183
References Chapter VII	187

Chapter VIII. Ion-Exchange Chromatography	189
A. Principle	189
B. Ion Exchange Materials	191
C. Characterization of the Ion Exchangers	193
D. Optimizing a Separation	195
E. Applications	200
References Chapter VIII	204
Chapter IX. Exclusion Chromatography. Gel Permeation Chromatography	206
A. Introduction	206
B. Basics of Exclusion Chromatography	206
C. Stationary Phases for Exclusion Chromatography	210
D. Applications of Exclusion Chromatography	212
References Chapter IX	221
Chapter X. Selection of the Separation System	222
References Chapter X	230
Chapter XI. Special Techniques	231
A. Preparative Chromatography	231
B. Qualitative Analysis	234
C. Quantitative Analysis	235
D. Trace Analysis	236
References Chapter XI	238
Chapter XII. Purification of Solvents	240
References Chapter XII	242
Subject Index	243
