

## CONTENTS

<b>I. Fundamental Introduction to Gel Permeation Chromatography</b>	
The Sizes of Polymer Molecules and the GPC Separation	3
Gel Permeation Chromatography Column Packings-Types and Uses	13
Chromatographic Instrumentation and Detection of Gel Permeation Effluents	25
Peak Resolution and Separation Power in Gel Permeation Chromatography	39
A Review of Peak Broadening in Gel Chromatography	47
Mathematical Methods of Correcting Instrumental Spreading in GPC	73
Comparison of Different Techniques of Correcting for Band Broadening in GPC	81
<b>II. Reviews of Theory and Evaluation Methods in GPC</b>	
Separation Mechanisms in Gel Permeation Chromatography	105
Gel Permeation Chromatography and Thermodynamic Equilibrium	119
Calibration of GPC Columns	135
Data Treatment in GPC	145
<b>III. New Developments in GPC</b>	
The Overload Effect in Gel Permeation Chromatography	157
Gel Permeation Chromatography Using a Bio-Glas Substrate Having a Broad Pore Size Distribution	165
High Resolution Gel Permeation Chromatography-Using Recycle	179
Gel Permeation Chromatography with High Loads	193
Fast Gel Permeation Chromatography	203
Extension of GPC Techniques	215
Phase Distribution Chromatography (PDC) of Polystyrene	225
Apparent and Real Distribution in GPC (Experiments with PMMA Samples)	235
The Instrument Spreading Correction in GPC. I. The General Shape Function Using a Linear Calibration Curve	243
The Instrument Spreading Correction in GPC. II. The General Shape Function Using the Fourier Transform Method with a Nonlinear Calibration Curve	291
Behavior of Micellar Solutions in Gel Permeation Chromatography. A Theory Based on a Simple Model	329
Gel Permeation Analysis of Macromolecular Association by an Equilibrium Method	339
Gel Filtration Chromatography	351

#### IV. Applications of GPC to Problems in Polymer and Petroleum Chemistry

Determination of Polymer Branching with Gel Permeation Chromatography.	
Abstract of a Review	363
Fractionation of Linear Polyethylene with Gel Permeation Chromatography. Part III	365
Application of GPC in the Study of Stereospecific Block Copolymers	377
Composition of Butadiene-Styrene Copolymers by Gel Permeation Chromatography	391
A Direct GPC Calibration for Low Molecular Weight Polybutadiene, Employing Dual Detectors	407
Quantitative Determination of Plasticizers in Polymeric Mixtures by GPC	417
Evaluation of Pulps, Rayon Fibers, and Cellulose Acetate by GPC and Other Fractionation Methods	429
Characterization of the Internal Pore Structures of Cotton and Chemically Modified Cottons by Gel Permeation	455
Application of GPC to Studies of the Viscose Process. I. Evaluation of the Method	465
Application of GPC to Studies of the Viscose Process. II. The Effects of Steeping and Alkali-Crumb. Aging	481
Gel Permeation Chromatography Calibration. I. Use of Calibration Curves Based on Polystyrene in THF and Integral Distribution Curves of Elution Volume to Generate Calibration Curves for Polymers in 2,2,2-Trifluoroethanol	493
Modification of a Gel Permeation Chromatograph for Automatic Sample Injection and On-Line Computer Data Recording	529
Characterization of Crude Oils by Gel Permeation Chromatography	549
Separation and Characterization of High-Molecular-Weight Saturate Fractions by Gel Permeation Chromatography	561
Fractionation of Residuals by Gel Permeation Chromatography	569
Combined Gel Permeation Chromatography-NMR Techniques in the Characterization of Petroleum Residuals	579
A Rapid Method of Identification and Assessment of Total Crude Oils and Crude Oil Fractions by Gel Permeation Chromatography	593
Gel Permeation Analysis of Asphaltenes from Steam Stimulated Oil Wells	611
GPC Separation and Integrated Structural Analysis of Petroleum Heavy Ends	623
AUTHOR INDEX	631
SUBJECT INDEX	641
