TLC-Nomenclature	xi
Chapter 1	1
R. W. FREI	
Reflectance Spectroscopy in Thin-Layer Chromatography	
Theory 2	
Kubelka-Munk Equation 2	
Particle Size and Sample Thickness 4	
Optimum Concentration Range and Calibration Curves 5	
Multicomponent Systems 9	
Apparatus 12	
Instrumentation 12	
Reflectance Cells 19	
Glass Window Cell 19	
Quartz Window Cell 19	
Windowless Cell 20	
General Experimental Procedure 21	
Detection of Spots 21	
Recording of Reflectance Spectra 22	
Quantitative Measurement of Reflectance 22	
Applications 24	
Visible Reflectance Spectroscopy of Organic Systems 25	
Dyes 25	
Amino Acids 28	
Sugars 38	
Ultraviolet Reflectance Spectroscopy of Organic Systems 39	
Aspirin and Salicylic Acid 39	
Amino Acid Derivatives and Nucleotides 40	
Vitamins 42	
Hormones 44	
Herbicides and Pesticides 44	
Miscellaneous Compounds 46	
Reflectance Spectroscopy of Inorganic Systems 46	
Rubeanic Acid Complexes 47	
Pyridine-2-aldehyde-2-quinolyldiazone (PAQH) Complexes 50	
Dithizone and Oxine Complexes 54	
Miscellaneous Techniques 56	

Appendix	57
Derivation of the Kubelka-Munk Function	57
References	58
Chapter 2	63
J. JANAK	
<i>GC-TLC: Two-Dimensional Chromatography Using Gas Chromatography as One Dimension</i>	
Theory	65
Consecutive Chromatography	65
Driving Velocity of the Thin-Layer	67
Programmed Shifting of the Thin-Layer	67
Test of Theory	69
Position of Zones on the Layer and Structural Correlations	69
Instrumentation and Methods	75
First Dimension: Gas Chromatography	75
Application of GC Effluent on the Starting Line of the Thin-Layer	77
Shifting of the Layer	78
Second Dimension: Thin-Layer Chromatography	80
New Adsorbents	81
Further Treatment for the Thin-Layer	82
Applications	83
Coal Tar Chemistry	85
Steroids	85
Lipids	86
Other Applications	86
Prospective Applications	90
References	90

Chemical and Enzymatic Degradative Reactions	110
Cleavage of Ether Bonds	112
Alkyl Ether Bonds	112
Alk-1-enyl Ether Bonds	112
Removal of Acyl, Phosphate, and Related Substituents	113
Lithium Aluminum Hydride Reduction	113
Saponification	113
Deacylation with Grignard Reagent. (RMgBr)	114
Lipolysis	114

Determination of the Double Bond Location	116
Reductive Ozonolysis	116
Permanganate-Periodate Oxidation	116
Chromic Acid Oxidation	117
Periodate Oxidation	117
Reactions for Stereospecific Analysis	118
Preparation of Derivatives for Gas-Liquid Chromatography	118
Alkyl Ethers	118
Acetates	118
Trifluoroacetates	120
Isopropylidenes	120
Alkoxy Acetaldehydes	120
Trimethylsilyl Ethers	122
Alkyl Iodides	122
Alk-1-enyl Ethers	122
Intact Aldehydes	122
Dimethyl Acetals of Fatty Aldehydes	123
Miscellaneous Derivatives	123
Analysis of Ether Lipids by TLC	123
Resolution of Classes: Neutral Lipids	123
Glyceryl Ethers	125
Diol Ethers	128
Resolution of Classes: Phospholipids	129
Resolution of Subclasses by Metal Ions	130
Reversed-Phase Systems	131
Analysis of Ether Lipids by Gas-Liquid Chromatography	132
High Temperature Techniques for Resolution of Intact Ether Lipids	132
Resolution of Homologous Series of Ether Lipids According to Chain Length and Degree of Unsaturation	133
References	137

Chapter 5 143

O. RENKONEN

Thin-Layer Chromatographic Analysis of Subclasses and Molecular Species of Polar Lipids

A Survey of Different Approaches	145
Separation of Species of Intact Phosphatidyl Cholines and Other Glycerophospholipid Classes	147
Argentation-TLC	147
Reversed-Phase TLC	152
Attempts to Separate Intact Subclasses of Lecithins and Related Phospholipid Classes	154
Subfractionation of Intact Sphingolipid Classes	159
Separation of Subclasses and Molecular Species of Glycerophosphatides through TLC of Diglyceride Acetates	160
Conversion of Glycerophosphatides into Diglyceride Acetates	160
Separation of Subclasses of Diglyceride Acetates	162
separation of Molecular Species of Diglycerides	163
Analysis of Sphingomyelin Species as Free and Acetylated Ceramides	167
TLC of Polar Lipids After Masking Their Polar Groups	171
Separations Obtainable with Dimethyl Phosphatidates	171
Separations Obtainable with Dinitrophenylated and Methylated Glycerophosphoryl Ethanolamine Lipids	175

Conclusion	178
