

CONTENTS

Introduction	1
Dissociation constants, buffered solutions and solubility constants	6
Apparatus and techniques	18
Preliminary tests	30
Separation into groups: theory	51
Separation into groups: practical details	72
The analysis of group i: the separation of lead, silver and mercurous mercury, thallos thallium, tungstate and silicate	81
The analysis of group ii: the separation of mercuric mercury, lead, bismuth, cadmium, copper, arsenic, antimony and tin, gold, platinum, palladium, selenium, tellurium and molybdenum	91
The analysis of group iii: the separation of aluminium, chromium and iron, vanadium, beryllium, titanium, cerium, thorium, zirconium and uranium	115
The analysis of group iv: the separation of zinc, nickel, cobalt, manganese and thallic thallium	127
The analysis of group v: the separation of calcium, strontium and barium	134
The analysis of group vi: the separation of potassium, sodium, magnesium and lithium	138
Analysis for anions	144
Confirmation of anions	169
Appendix	185
Index	191
