

CONTENTS

1. Chemical Equations	1
2. Expressing the Concentration of Solutions	18
3. Electrons, Atoms, Bonds, and Molecules	28
4. Werner Ions and Complex Compounds	67
5. Acid-Base Theories and the Electrical Conductance of Electrolytes	82
6. Reaction Rates and Chemical Equilibrium	96
7. Equilibrium and Weak Acids and Bases	108
8. Equilibrium and Slightly Soluble Electrolytes	127
9. Equilibrium and Werner Ions	144
10. Equilibrium and Hydrolysis	154
11. Equilibrium and Redox: Electrochemical Cells	169
12. Organic Reagents for Qualitative Analysis	190
13. Minerals, Metals, and Crystals	199
14. Orientation for the Laboratory work	216
15. Cation Group 1	231
16. Cation Group 2	247
17. Cation Group 3	277
18. Cation Group 4	306
19. Cation Group 5	319
20. Some Less Familiar Engineering Metals	334
21. Analysis of a General Cation Unknown	358
22. The Anion Groups	374
23. Special Experiments	417
Appendix	449
Index	477
