

CONTENTS

CHAPTER 1 GENERAL INTRODUCTION

1.1 Thermometric titration	1
1.2 Thermodynamic principles	5
1.3 Electrochemical principles	14
1.4 Titrations in nonaqueous solvents	19

CHAPTER 2 THEORETICAL BASIS FOR AN ANALYSIS OF THERMOGRAMS

2.1 Thermograms	24
2.2 The basic equation of thermometric titration	29
2.3 Evaluation of titration diagrams	35

CHAPTER 3 METHODS OF THERMOMETRIC TITRATION

3.1 The TET method	56
3.2 The DIE method	66
3.3 Continuous-flow enthalpimetry	70
3.4 Special methods for increasing the accuracy of titration	73
3.5 Methods with amplified end-point indication	75

CHAPTER 4 ACID-BASE TITRATIONS IN AQUEOUS SOLUTIONS

4.1 The heat effect of standard reactions	77
4.2 Titration of strong acids with strong bases in aqueous solutions	81
4.3 Titration of weak acids or weak bases in aqueous solutions	82

CHAPTER 5 TITRATIONS IN NONAQUEOUS SOLVENTS

5.1 Determination of the purity of solvents	98
5.2 Lewis acids and Lewis bases	99
5.3 Organometallic compounds	101
5.4 Bronsted acids and Bronsted bases	102
5.5 Special end point indication techniques	104
5.6 Further titrations in nonaqueous solvents	108
5.7 Thermometric titration in molten salts	109

CHAPTER 6 THERMOMETRIC PRECIPITATION TITRATION

6.1 Theoretical basis of precipitation titration	113
6.2 Special types of precipitation reaction	118

CHAPTER 7 THERMOMETRIC REDOX TITRATIONS

7.1 Potassium dichromate titrations	127
7.2 Titrations with permanganate	130
7.3 Titrations with metal ions	131
7.4 Hydrogen peroxide titrations	132
7.5 Titrations with arsenious acid, iodine, hypochlorite, and further agents	133

CHAPTER 8 FORMATION OF COMPOUNDS AND COMPLEXES. PROBLEMS OF COMPLEXOMETRIC TITRATION

8.1 Attempts to determine the composition of complex compounds	135
8.2 Determination of thermodynamic data of a complex-formation reaction	138
8.3 Complexometric titrations	149

CHAPTER 9 INSTRUMENTATION IN TITRATION CALORIMETRY BY R. WACHTER

9.1 Principles of design	159
9.2 Calorimetric equipment for special purposes	181
