

CONTENTS

1. Mass Spectrometric Studies of Chemionization by Reaction of Electronically Excited Species	1
2. Ion-Molecule Reactions Involving Pentaborane	15
3. Mass Spectrometric Study of Ion-Solvent Molecule Interactions in the Gas Phase	24
4. The Mass Spectrometer as a Radiolytic and a Catalytic Laboratory	48
5. Direct Mass Spectrometric Sampling of High Pressure Systems	68
6. Shock Tube Study of a D ₂ -Ne Mixture From 900°-2300°K	83
7. Mass Spectrometric Study of Intermediates in the Photochemical Oxidation of Diborane	94
8. Mass Spectrometric Study of the Noble Metal Oxides. Ruthenium Oxygen System	101
9. Calculation of Electron Impact Ionization Cross Sections	115
10. Automated Data Acquisition and Treatment in Inorganic Mass Spectroscopy	127
11. Mass Spectrometric Studies of Unstable Species	137
12. Mass Spectrometry of Inorganic Halides	153
13. Mass Spectrometry of Phosphorus Hydrides	181
14. Analysis of Boranes and Carboranes by Mass Spectrometry	191
15. High Molecular Weight Boron Sulfides. IV. Mass Spectrometric Investigation of the Conversion of Metathioboric Acid to Boron Sulfide	211
16. A Modified Mass Spectrometer Ion Source for the Study of High Temperature Vaporization. Vaporization of Zinc, Cadmium, Arsenic, Selenium, Cadmium Arsenide, and Cadmium Selenide	231
17. Mass Spectrometry of Molecules of the Nitrogen Family	245
18. Appearance Potentials, Ionization Potentials, and Heats of Formation for Perfluorosilanes and Perfluoroborosilanes	261
19. Mass Spectrometric Studies of Scandium, Yttrium, Lanthanum, and Rare-Earth Fluorides	267
20. The Mass Effect of Electron Multipliers in High Temperature Mass Spectrometric Applications	291
21. Applications of Time Resolved Mass Spectrometry to Problems in High Temperature Chemistry	301
Index	325
