

CONTENTS

1. Principles, Types and Theory of Isotope Dilution Analysis	11
1.1 General principles	11
1.2 Classification of the methods of IDA	14
1.3 Types of IDA	17
1.4 Precision, accuracy and sensitivity of IDA	48
1.5 Advantages, drawbacks, trends	57
1.6 References	61
2. Experimental Techniques, Separation and Mass Determination	69
2.1 Reagents and tracers	69
2.2 Separation of components	76
2.3 Determination of the amount of substance separated	90
2.4 References	95
3. Inorganic Applications	99
3.1 Determination of various elements	99
3.2 Selected procedures	116
3.3 References	121
4. Applications in Organic Chemistry and Biochemistry	127
4.1 Alcohols and ethers	127
4.2 Carboxylic acids, acid chlorides and anhydrides	128
4.3 Sulpho derivatives	129
4.4 Proteins and amino acids	130
4.5 Steroids	137
4.6 Vitamin B ₁₂	138
4.7 Penicillin	143
4.8 Insecticides	144
4.9 Other applications in organic chemistry and biochemistry	147
4.10 References	148
5. Isotope Dilution Analysis with Stable Isotopes	155
5.1 Introduction	155
5.2 Methods for the determination of isotopic composition Analysis by mass spectrometry	156
5.3 Fundamentals and technique	158
5.4 Practical applications	160
5.5 References	167

6. Special Applications of Isotope Dilution	171
6.1 Volume determination	171
6.2 Determination of solubility	175
6.3 Determination of radioactive contaminants	177
6.4 Determination of the content of isotopic carriers in radio-active preparations	179
6.5 Determination of dissociation constants	180
6.6 Studies on reaction rates and equilibria	183
6.7 Determination of the capacity of ion exchangers	184
6.8 Determination of the coefficient of self-absorption and of specific activity	186
6.9 Measurement of flow rates	187
6.10 References	188
Index	191
