

CONTENTS

Opening Address	
Premelting and the formation of solid solutions	1
Molecular rotation and translation in crystals of compounds formed between highly branched hydrocarbons	7
Some considerations governing the choice of method for purity determinations by cryoscopy	15
Errors occurring in the determination of temperature-heat content curves	23
Calculation of cryoscopic data	36
Auswertung von Erstarrungs- und Schmelzkurven zur Berechnung des Reinheitsgrades mittels Maschinenlochkarten	43
Die Erlangungsfähigkeit des Gleichgewichtes in Systemen, die aus Flüssigkeit und wenigstens aus einer festen Phase gebildet sind	49
Comparison of cryoscopic determinations of purity of benzene by thermometric and calorimetric procedures	54
Melting-point purity determination: Limitations as evidenced by calorimetric studies in the melting region	80
Thermal analysis of normal alkanes	97
Freezing point and heating curve behavior for an organic reciprocal salt pair system	107
Experimental methods for the determinations of purity by cryoscopy in current use at the chemical research laboratory, Teddington	115
The evaluation of cryoscopic constants for use in the determination of purity by the freezing point method	125
An automatic adiabatic low temperature calorimeter	133
A simplified calorimeter for the precise determination of purity	144
An automatic (or semi-automatic) apparatus for the determination of melting curves	161
Digest of Discussion	173
Subject Index	181
