

CONTENTS

Preface	5
Chapter 1. General Analytical Properties of the Elements (Fundamentals of Elemental Qualitative Analysis)	
1.1 Objectives and Methods of Qualitative Analysis	13
1.2 The Periodic Law and the Periodic Table of Chemical Elements	15
1.3 Some Basic Chemical Concepts and Characteristics of Elements in Compounds	27
1.4 Preparation and Dissolution of Precipitates	42
1.5 The Protolytic Equilibrium and the Protolytic Properties of Ions	65
1.6 The Oxidation-Reduction Properties of Ions in Aqueous Solutions	120
1.7 The Complex-Forming Properties of Ions and Use of Complex-Formation Reactions in Analytical Chemistry	152
1.8 Kinetics and Catalysis in Qualitative Analysis	181
Chapter 2. Characteristic Reactions of Atoms, Ions and Molecules	
2.1 The Analytical Properties of Atoms	194
2.2 The Use of Nuclear Characteristics in Qualitative Chemical Analysis	211
2.3 Determination of Ions by the Precipitation Method	219
2.4 Determination of Ions by the Formation of Coloured Substances	228
2.5 Some Other Physico-Chemical and Chemical Methods of Detection of Ions	244
2.6 The Analytical Properties of Molecules	255
Chapter 3. Methods of Concentration, Masking and Separation of Ions and Molecules	
3.1 Methods of Concentration	261
3.2 Masking Methods	272
3.3 Methods of Separation and Isolation of Ions	279
Chapter 4. Methods of Qualitative Investigation of Some Industrial and Natural Materials	
4.1 Preliminary Tests and the Systematic Course of Analysis	301
4.2 Qualitative Analysis of Some Materials	309
4.3 Qualitative Phase Analysis	315
