

CONTENTS

<i>Preface</i>	<i>xiii</i>		
0 The Analytical Process	1		
The "Most Important" Environmental Data Set of the Twentieth Century	1		
0-1 Charles David Keeling and the Measurement of Atmospheric CO ₂	1		
0-2 The Analytical Chemist's Job	6		
0-3 General Steps in a Chemical Analysis	11		
Box 0-1 Constructing a Representative Sample	12		
1 Chemical Measurements	13		
Biochemical Measurements with a Nanoelectrode	13		
1-1 SI Units	13		
1-2 Chemical Concentrations	16		
1-3 Preparing Solutions	19		
1-4 Stoichiometry Calculations for Gravimetric Analysis	21		
1-5 Introduction to Titrations	22		
Box 1-1 Reagent Chemicals and Primary Standards	23		
1-6 Titration Calculations	24		
2 Tools of the Trade	29		
Quartz Crystal Microbalance in Medical Diagnosis	29		
2-1 Safe, Ethical Handling of Chemicals and Waste	30		
2-2 The Lab Notebook	31		
2-3 Analytical Balance	31		
2-4 Burets	35		
2-5 Volumetric Flasks	37		
2-6 Pipets and Syringes	38		
2-7 Filtration	40		
2-8 Drying	41		
2-9 Calibration of Volumetric Glassware	42		
2-10 Introduction to Microsoft Excel [®]	43		
2-11 Graphing with Microsoft Excel	46		
Reference Procedure Calibrating a 50-mL Buret	49		
3 Experimental Error	51		
Experimental Error	51		
3-1 Significant Figures	51		
3-2 Significant Figures in Arithmetic	52		
3-3 Types of Error	55		
Box 3-1 Case Study in Ethics: Systematic Error in Ozone Measurement	55		
3-4 Propagation of Uncertainty from Random Error	57		
		Box 3-2 Keeling's Exquisitely Precise Measurement of CO₂	60
		3-5 Propagation of Uncertainty from Systematic Error	62
		4 Statistics	68
		Is My Red Blood Cell Count High Today?	68
		4-1 Gaussian Distribution	68
		4-2 Confidence Intervals	73
		4-3 Comparison of Means with Student's <i>t</i>	76
		Box 4-1 Choosing the Null Hypothesis in Epidemiology	79
		4-4 Comparison of Standard Deviations with the <i>F</i> Test	80
		4-5 <i>t</i> Tests with a Spreadsheet	82
		4-6 Grubbs Test for an Outlier	83
		4-7 The Method of Least Squares	83
		4-8 Calibration Curves	87
		Box 4-2 Using a Nonlinear Calibration Curve	88
		4-9 A Spreadsheet for Least Squares	89
		5 Quality Assurance and Calibration Methods	96
		The Need for Quality Assurance	96
		5-1 Basics of Quality Assurance	97
		Box 5-1 Control Charts	99
		5-2 Method Validation	100
		Box 5-2 The Horwitz Trumpet: Variation in Interlaboratory Precision	103
		5-3 Standard Addition	106
		5-4 Internal Standards	109
		5-5 Efficiency in Experimental Design	110
		6 Chemical Equilibrium	117
		Chemical Equilibrium in the Environment	117
		6-1 The Equilibrium Constant	118
		6-2 Equilibrium and Thermodynamics	119
		6-3 Solubility Product	121
		Box 6-1 Solubility Is Governed by More Than the Solubility Product	122
		Demonstration 6-1 Common Ion Effect	122
		6-4 Complex Formation	124
		Box 6-2 Notation for Formation Constants	124
		6-5 Protic Acids and Bases	126
		6-6 pH	128
		6-7 Strengths of Acids and Bases	130
		Demonstration 6-2 The HCl Fountain	131
		Box 6-3 The Strange Behavior of Hydrofluoric Acid	132
		Box 6-4 Carbonic Acid	134

7	Activity and the Systematic Treatment of Equilibrium	142	10-6	Finding the End Point with Indicators	219
	Hydrated Ions	142		Box 10-2 What Does a Negative pH Mean?	220
7-1	The Effect of Ionic Strength on Solubility of Salts	143		Demonstration 10-1 Indicators and the Acidity of CO ₂	221
	Demonstration 7-1 Effect of Ionic Strength on Ion Dissociation	143	10-7	Practical Notes	223
	Box 7-1 Salts with Ions of Charge $\geq 2 $ Do Not Fully Dissociate	145	10-8	Kjeldahl Nitrogen Analysis	223
7-2	Activity Coefficients	145		Box 10-3 Kjeldahl Nitrogen Analysis Behind the Headlines	224
7-3	pH Revisited	149	10-9	The Leveling Effect	225
7-4	Systematic Treatment of Equilibrium	150	10-10	Calculating Titration Curves with Spreadsheets	226
	Box 7-2 Calcium Carbonate Mass Balance in Rivers	153		Reference Procedure Preparing Standard Acid and Base	235
7-5	Applying the Systematic Treatment of Equilibrium	153	11	EDTA Titrations	236
8	Monoprotic Acid-Base Equilibria	162		Ion Channels in Cell Membranes	236
	Measuring pH Inside Cellular Compartments	162	11-1	Metal-Chelate Complexes	237
8-1	Strong Acids and Bases	163		Box 11-1 Chelation Therapy and Thalassemia	238
	Box 8-1 Concentrated HNO ₃ Is Only Slightly Dissociated	163	11-2	EDTA	240
8-2	Weak Acids and Bases	165	11-3	EDTA Titration Curves	243
8-3	Weak-Acid Equilibria	166	11-4	Do It with a Spreadsheet	245
	Demonstration 8-1 Conductivity of Weak Electrolytes	167	11-5	Auxiliary Complexing Agents	246
	Box 8-2 Dyeing Fabrics and the Fraction of Dissociation	169		Box 11-2 Metal Ion Hydrolysis Decreases the Effective Formation Constant for EDTA Complexes	247
8-4	Weak-Base Equilibria	170	11-6	Metal Ion Indicators	249
8-5	Buffers	171		Demonstration 11-1 Metal Ion Indicator Color Changes	249
	Box 8-3 Strong Plus Weak Reacts Completely	174	11-7	EDTA Titration Techniques	251
	Demonstration 8-2 How Buffers Work	176		Box 11-3 Water Hardness	253
9	Polyprotic Acid-Base Equilibria	185	12	Advanced Topics in Equilibrium	258
	Proteins Are Polyprotic Acids and Bases	185		Acid Rain	258
9-1	Diprotic Acids and Bases	186	12-1	General Approach to Acid-Base Systems	259
	Box 9-1 Carbon Dioxide in the Air and Ocean	189	12-2	Activity Coefficients	262
	Box 9-2 Successive Approximations	191	12-3	Dependence of Solubility on pH	265
9-2	Diprotic Buffers	193	12-4	Analyzing Acid-Base Titrations with Difference Plots	270
9-3	Polyprotic Acids and Bases	194	13	Fundamentals of Electrochemistry	279
9-4	Which Is the Principal Species?	195		Lithium-Ion Battery	279
9-5	Fractional Composition Equations	197	13-1	Basic Concepts	280
9-6	Isoelectric and Isoionic pH	199		Box 13-1 Ohm's Law, Conductance, and Molecular Wire	283
	Box 9-3 Isoelectric Focusing	200	13-2	Galvanic Cells	284
10	Acid-Base Titrations	205		Demonstration 13-1 The Human Salt Bridge	286
	Acid-Base Titration of a Protein	205	13-3	Standard Potentials	287
10-1	Titration of Strong Base with Strong Acid	206	13-4	Nernst Equation	288
10-2	Titration of Weak Acid with Strong Base	208		Box 13-2 E° and the Cell Voltage Do Not Depend on How You Write the Cell Reaction	290
10-3	Titration of Weak Base with Strong Acid	210		Box 13-3 Latimer Diagrams: How to Find E° for a New Half-Reaction	292
10-4	Titrations in Diprotic Systems	212			
10-5	Finding the End Point with a pH Electrode	215			
	Box 10-1 Alkalinity and Acidity	216			

13-5	E° and the Equilibrium Constant	293	Box 16-2 What Is an "Electronic Nose"?	372	
	Box 13-4 Concentrations in the Operating Cell	293	16-5 Voltammetry	376	
13-6	Cells as Chemical Probes	295	Box 16-3 The Electric Double Layer	379	
13-7	Biochemists Use E°	297	16-6 Karl Fischer Titration of H_2O	385	
14	Electrodes and Potentiometry	308	17	Fundamentals of Spectrophotometry	393
	Chem Lab on Mars	308		The Ozone Hole	393
14-1	Reference Electrodes	309	17-1	Properties of Light	394
14-2	Indicator Electrodes	311	17-2	Absorption of Light	395
	Demonstration 14-1 Potentiometry with an Oscillating Reaction	313		Box 17-1 Why Is There a Logarithmic Relation Between Transmittance and Concentration?	397
14-3	What Is a Junction Potential?	313		Demonstration 17-1 Absorption Spectra	398
14-4	How Ion-Selective Electrodes Work	314	17-3	Measuring Absorbance	399
14-5	pH Measurement with a Glass Electrode	317	17-4	Beer's Law in Chemical Analysis	400
	Box 14-1 Systematic Error in Rainwater pH Measurement: The Effect of Junction Potential	322	17-5	Spectrophotometric Titrations	403
14-6	Ion-Selective Electrodes	323	17-6	What Happens When a Molecule Absorbs Light?	404
	Box 14-2 Measuring Selectivity Coefficients for an Ion-Selective Electrode	324		Box 17-2 Fluorescence All Around Us	407
	Box 14-3 How Was Perchlorate Discovered on Mars?	328	17-7	Luminescence	408
14-7	Using Ion-Selective Electrodes	330		Box 17-3 Rayleigh and Raman Scattering	411
14-8	Solid-State Chemical Sensors	331	18	Applications of Spectrophotometry	419
15	Redox Titrations	340		Fluorescence Resonance Energy Transfer Biosensor	419
	Chemical Analysis of High-Temperature Superconductors	340	18-1	Analysis of a Mixture	419
15-1	The Shape of a Redox Titration Curve	341	18-2	Measuring an Equilibrium Constant: The Scatchard Plot	424
	Box 15-1 Many Redox Reactions Are Atom-Transfer Reactions	342	18-3	The Method of Continuous Variation	425
15-2	Finding the End Point	344	18-4	Flow Injection Analysis and Sequential Injection	427
	Demonstration 15-1 Potentiometric Titration of Fe^{2+} with MnO_4^-	345	18-5	Immunoassays and Aptamers	431
15-3	Adjustment of Analyte Oxidation State	348	18-6	Sensors Based on Luminescence Quenching	433
15-4	Oxidation with Potassium Permanganate	349		Box 18-1 Converting Light into Electricity	434
15-5	Oxidation with Ce^{4+}	350		Box 18-2 Upconversion	437
15-6	Oxidation with Potassium Dichromate	351	19	Spectrophotometers	445
15-7	Methods Involving Iodine	351		Cavity Ring-Down Spectroscopy: Do You Have an Ulcer?	445
	Box 15-2 Environmental Carbon Analysis and Oxygen Demand	352	19-1	Lamps and Lasers: Sources of Light	447
	Box 15-3 Iodometric Analysis of High-Temperature Superconductors	355		Box 19-1 Blackbody Radiation and the Greenhouse Effect	448
16	Electroanalytical Techniques	361	19-2	Monochromators	450
	How Sweet It Is!	361	19-3	Detectors	454
16-1	Fundamentals of Electrolysis	362		Box 19-2 The Most Important Photoreceptor	456
	Demonstration 16-1 Electrochemical Writing	363		Box 19-3 Nondispersive Infrared Measurement of CO_2 on Mauna Loa	460
16-2	Electrogravimetric Analysis	367	19-4	Optical Sensors	461
16-3	Coulometry	369	19-5	Fourier Transform Infrared Spectroscopy	467
16-4	Amperometry	371	19-6	Dealing with Noise	472
	Box 16-1 Clark Oxygen Electrode	371			

20	Atomic Spectroscopy	479	24	High-Performance Liquid Chromatography	595
	An Anthropology Puzzle	479		Paleothermometry: How to Measure Historical Ocean Temperatures	595
20-1	An Overview	480	24-1	The Chromatographic Process	596
	Box 20-1 Mercury Analysis by Cold Vapor Atomic Fluorescence	482		Box 24-1 Monolithic Silica Columns	601
20-2	Atomization: Flames, Furnaces, and Plasmas	482		Box 24-2 Structure of the Solvent-Bonded Phase Interface	604
20-3	How Temperature Affects Atomic Spectroscopy	487		Box 24-3 "Green" Technology: Supercritical Fluid Chromatography	606
20-4	Instrumentation	488	24-2	Injection and Detection in HPLC	611
20-5	Interference	493	24-3	Method Development for Reversed-Phase Separations	617
20-6	Inductively Coupled Plasma–Mass Spectrometry	495	24-4	Gradient Separations	623
	Box 20-2 GEOTRACES	497	24-5	Do It with a Computer	625
21	Mass Spectrometry	502		Box 24-4 Choosing Gradient Conditions and Scaling Gradients	625
	Droplet Electrospray	502	25	Chromatographic Methods and Capillary Electrophoresis	634
21-1	What Is Mass Spectrometry?	502		Capillary Electrochromatography	634
	Box 21-1 Molecular Mass and Nominal Mass	504	25-1	Ion-Exchange Chromatography	635
	Box 21-2 How Ions of Different Masses Are Separated by a Magnetic Field	504	25-2	Ion Chromatography	642
21-2	Oh, Mass Spectrum, Speak to Me!	507		Box 25-1 Surfactants and Micelles	645
	Box 21-3 Isotope Ratio Mass Spectrometry	509	25-3	Molecular Exclusion Chromatography	647
21-3	Types of Mass Spectrometers	512	25-4	Affinity Chromatography	649
21-4	Chromatography–Mass Spectrometry	519		Box 25-2 Molecular Imprinting	650
	Box 21-4 Matrix-Assisted Laser Desorption/Ionization	527	25-5	Hydrophobic Interaction Chromatography	650
21-5	Open-Air Sampling for Mass Spectrometry	529	25-6	Principles of Capillary Electrophoresis	650
22	Introduction to Analytical Separations	537	25-7	Conducting Capillary Electrophoresis	657
	Measuring Silicones Leaking from Breast Implants	537	25-8	Lab-on-a-Chip: Probing Brain Chemistry	665
22-1	Solvent Extraction	538	26	Gravimetric Analysis, Precipitation Titrations, and Combustion Analysis	673
	Demonstration 22-1 Extraction with Dithizone	540		The Geologic Time Scale and Gravimetric Analysis	673
	Box 22-1 Crown Ethers and Phase Transfer Agents	542	26-1	Examples of Gravimetric Analysis	674
22-2	What Is Chromatography?	542	26-2	Precipitation	676
22-3	A Plumber's View of Chromatography	544		Demonstration 26-1 Colloids and Dialysis	677
22-4	Efficiency of Separation	548	26-3	Examples of Gravimetric Calculations	680
22-5	Why Bands Spread	554	26-4	Combustion Analysis	682
	Box 22-2 Microscopic Description of Chromatography	558	26-5	Precipitation Titration Curves	685
23	Gas Chromatography	565	26-6	Titration of a Mixture	689
	What Did They Eat in the Year 1000?	565	26-7	Calculating Titration Curves with a Spreadsheet	690
23-1	The Separation Process in Gas Chromatography	565	26-8	End-Point Detection	691
	Box 23-1 Chiral Phases for Separating Optical Isomers	570		Demonstration 26-2 Fajans Titration	692
	Box 23-2 Chromatography Column on a Chip	576	27	Sample Preparation	699
23-2	Sample Injection	577		Cocaine Use? Ask the River	699
23-3	Detectors	579	27-1	Statistics of Sampling	701
23-4	Sample Preparation	584	27-2	Dissolving Samples for Analysis	705
23-5	Method Development in Gas Chromatography	587	27-3	Sample Preparation Techniques	710

Notes and References

Glossary

Appendixes

A. Logarithms and Exponents	NR1
B. Graphs of Straight Lines	GL1
C. Propagation of Uncertainty	AP1
D. Oxidation Numbers and Balancing Redox Equations	AP2
E. Normality	AP3
F. Solubility Products	AP5
G. Acid Dissociation Constants	AP8
H. Standard Reduction Potentials	AP9
I. Formation Constants	AP11
J. Logarithm of the Formation Constant for the Reaction $M(aq) + L(aq) \rightleftharpoons ML(aq)$	AP20
K. Analytical Standards	AP28

Solutions to Exercises

Answers to Problems

Index

Experiments

Experiments are found at the Web site
www.whfreeman.com/qca8e

0. Green Chemistry	S1
1. Calibration of Volumetric Glassware	AN1
2. Gravimetric Determination of Calcium as $CaC_2O_4 \cdot H_2O$	11
3. Gravimetric Determination of Iron as Fe_2O_3	
4. Penny Statistics	
5. Statistical Evaluation of Acid-Base Indicators	
6. Preparing Standard Acid and Base	
7. Using a pH Electrode for an Acid-Base Titration	
8. Analysis of a Mixture of Carbonate and Bicarbonate	
9. Analysis of an Acid-Base Titration Curve: The Gran Plot	
10. Fitting a Titration Curve with Excel Solver	
11. Kjeldahl Nitrogen Analysis	
12. EDTA Titration of Ca^{2+} and Mg^{2+} in Natural Waters	
13. Synthesis and Analysis of Ammonium Decavanadate	
14. Iodimetric Titration of Vitamin C	
15. Preparation and Iodometric Analysis of High-Temperature Superconductor	
16. Potentiometric Halide Titration with Ag^+	
17. Electrogravimetric Analysis of Copper	
18. Polarographic Measurement of an Equilibrium Constant	
19. Coulometric Titration of Cyclohexene with Bromine	
20. Spectrophotometric Determination of Iron in Vitamin Tablets	
21. Microscale Spectrophotometric Measurement of Iron in Foods by Standard Addition	
22. Spectrophotometric Measurement of an Equilibrium Constant	
23. Spectrophotometric Analysis of a Mixture: Caffeine and Benzoic Acid in a Soft Drink	
24. Mn^{2+} Standardization by EDTA Titration	

25. Measuring Manganese in Steel by Spectrophotometry with Standard Addition	
26. Measuring Manganese in Steel by Atomic Absorption Using a Calibration Curve	
27. Properties of an Ion-Exchange Resin	
28. Analysis of Sulfur in Coal by Ion Chromatography	
29. Measuring Carbon Monoxide in Automobile Exhaust by Gas	
30. Amino Acid Analysis by Capillary Electrophoresis	
31. DNA Composition by High-Performance Liquid Chromatography	
32. Analysis of Analgesic Tablets by High-Performance Liquid Chromatography	
33. Anion Content of Drinking Water by Capillary Electrophoresis	
34. Green Chemistry: Liquid Carbon Dioxide Extraction of Lemon Peel Oil	

Spreadsheet Topics

2-10 Introduction to Microsoft Excel	43
2-11 Graphing with Microsoft Excel	46
<i>Problem 3-8 Controlling the appearance of a graph</i>	66
4-1 Average, standard deviation	70
4-1 Area under a Gaussian curve (NORMDIST)	71
4-3 <i>t</i> Distribution (TDIST)	80
Table 4-4 <i>F</i> Distribution (FINV)	81
4-5 <i>t</i> Test	82
4-7 Equation of a straight line (SLOPE and INTERCEPT)	85
4-7 Equation of a straight line (LINEST)	86
4-9 Spreadsheet for least squares	89
4-9 Error bars on graphs	90
5-2 Square of the correlation coefficient, R^2 (LINEST)	101
5-5 Multiple linear regression and experimental design (LINEST)	110
<i>Problem 5-15 Using TRENDFIT</i>	113
7-5 Solving equations with Excel GOAL SEEK	158
<i>Problem 7-29 Circular reference</i>	161
8-5 Excel GOAL SEEK and naming cells	181
10-10 Acid-base titration	226
11-4 EDTA titrations	245
<i>Problem 11-19 Auxiliary complexing agents in EDTA titrations</i>	256
<i>Problem 11-21 Complex formation</i>	256
12-1 Using Excel SOLVER	261
12-2 Activity coefficients with the Davies equation	262
12-4 Fitting nonlinear curves by least squares	272
12-4 Using Excel SOLVER for more than one unknown	273
18-1 Solving simultaneous equations with Excel SOLVER	419
18-1 Solving simultaneous equations by matrix inversion	422
<i>Problem 23-30 Binomial distribution for isotope patterns (BINOMDIST)</i>	593
24-5 Computer simulation of a chromatogram	625
26-7 Precipitation titration curves	690
