Subject Index	287
Cumulative Index	301

Hydrides of Groups IV and V

WILLIAM L. JOLLY

*Department of Chemistry, University of California and the
Inorganic Materials Research Division, Lawrence Radiation
Laboratory, Berkeley, California*

and

ARLAN D. NORMAN

*Department of Chemistry, University of Colorado, Boulder,
Colorado*

I. Introduction	2
II. Synthetic Procedures	2
A. Synthesis Using Lithium Aluminum Hydride	2
B. Synthesis Using Hydroborates	6
C. Reactions of Metal Salts of Hydrides with Halo Hydrides	8
D. Solvolysis of "ide" Salts	12
E. Electrolytic and Active Metal Reduction in Protonic Solvents	15
F. Coupling Reactions	16
1. Oxidative Coupling	16
2. Würtz-Fittig Coupling Reaction	18
G. Ozonizer-Type Silent Electric Discharge Synthesis	18
H. Synthesis by Pyrolysis of Binary Hydrides	24
I. Disproportionation Reactions	27
J. Miscellaneous Methods	33
1. Exchange Reactions	33
2. Amine-Induced Reactions	34
3. Cleavage of Silicon-Phosphorus Bonds	34
4. Photochemical Reactions	35
5. Alkali and Alkaline Earth Metal Hydride Reductions	36
6. "Active" Phosphorus	36
7. Active Metals in Nonprotonic Solvents	37
8. Hydrolysis of Phosphonium Halides	37
9. Synthesis in a Molten Salt Electrolysis Cell	38
10. Reduction of Silica with Hydrogen and Aluminum	38
11. Atomic Hydrogen Reactions	39
12. Solvolysis of Lower Oxides	42
III. Recommended Procedures	43
IV. Physical Properties	45
References	51
