Preface	9
Introduction	11
CHAPTER 1 The Analytical Selectivity of Reactions Based on Complex Formation	15
I. Effect of the stabilities of complexes upon selectivity	15
1. Factors determining the stabilities of complexes	15
2. The ratio of stepwise stability constants and analytical selectivity	23
3. The significance of stability constants and equilibrium calculations in determining the analytical selectivity	26
II. Effect of changes in the electronic structure of the central atom upon the selectivity of the reaction	41
1. Ligand-field effect	42
2. Effect of back-coordination	45
III. Analytical selectivity of the formation of mixed complexes	47
IV. Functional groups and analytical selectivity	54
CHAPTER 2 Application of Selective Organic Reagents in Quantitative Chemical Analysis	67
I. The methods of application of selective organic reagents	67
1. Organic reagents in gravimetric analysis	68
2. Organic reagents in volumetric analysis	70
3. Organic reagents in spectrophotometric analysis	72
4. Organic reagents in polarography	75
5. Organic reagents in chromatography and ion-exchange	78
II. Some important organic metal reagents	79
1. Phenanthroline and related compounds	80
2. Oximes	83
3. Nitroso compounds	92
4. Nitro compounds	94
5. Oxine and its derivatives	96
6. PAN	108
7. Organic acids	108
8. Flavones	111
9. ...-Diketones	112
10. Dithizone	118
11. Dithiocarbamates	124

12. Further sulfur-containing reagents	129
13. Arsonic acids	132
14. Kalignost	137
