

CONTENTS

1. INTRODUCTION	1
Scope	1
History and Occurrence of Nickel	4
Properties of Nickel	19
Effect of Trace Elements on Properties of Nickel	22
Problems of Nickel Analysis	25
2. SAMPLING	31
Form and Packaging of Primary Nickel	31
ASTM Sampling Methods	33
Alternative Sampling Methods	34
Sampling the Gross Sample	36
Sampling Experiments	37
Recommended Sampling Methods for Nickel	39
3. OPTICAL SPECTROCHEMICAL METHODS	42
Optical Spectrochemical Methods	46
Spectrographic Standards for Nickel Analysis	52
The Method of Jaycox	54
The Method of Shvarts and Nilova	56
The Method of Rupp, Klecak, and Morrison	58
Outline of Falconbridge Method	59
Rapid Routine Procedure	60
Qualitative Analysis	70
Strong Direct-Current Arc Procedure	72
High Voltage Spark Procedure	75
Procedure for Refractory Elements	77
Procedure for Sodium, Barium, Rubidium	80
4. X-RAY SPECTROCHEMICAL METHODS	85
X-ray Spectrochemical Methods	85
Literature Survey	90
Discussion	92
Method	100

5. SPECTROPHOTOMETRIC METHODS	103
Aluminium	107
Antimony	109
Arsenic	113
Cobalt	116
Copper	120
Iron	124
Phosphorus	128
Selenium	132
Silicon	134
Silver	135
Tellurium	137
Zinc	138
6. POLAROGRAPHIC METHODS	145
Literature Survey	148
Copper and Lead	149
Lead	151
Zinc	152
7. DETERMINATION OF CARBON AND SULPHUR	155
Carbon	155
Sulphur	160
8. DETERMINATION OF GASES	170
Methods of Gas Analysis	170
Discussion	174
Procedure for Determination of Hydrogen, Oxygen and Nitrogen in Nickel	179
9. OTHER METHODS OF ANALYSIS	184
Flame Spectrophotometry	185
Atomic Absorption Spectrophotometry	192
Spark Source Solids Mass Spectrometry	197
AUTHOR INDEX	201
SUBJECT INDEX	205
OTHER TITLES IN THE SERIES	215
