

## CONTENTS

1. Mechanical and Thereal Properties	1
2. Optical Functions (Complex Refractive Index and Absorption Coefficient)	59
3. Resistivity and Piezoresistance	81
4. Carrier Ionisation Rates	105
5. Electron Mobility, Diffusion and Lifetiem	121
6. Hole Mobility, Diffusion and Lifetime	151
7. Band Structure	169
8. Photoconductivity and Photogenerated Carrier Lifetimes	183
9. Photoluminescence	205
10. Deep Levels	219
11. Defect Structure	245
12. Oxygen, Carbon and Nitrogen in Silicon	279
13. Diffusion, Solid Solubility and Implantation of Group III and Group v Impurities	325
14. Diffusion and solubility of Transition Metals	409
15. Diffusion and Solubility of Alkali Metals	453
16. Oxidation	467
17. Insulating Layers on Silicon Substrates	497
18. Silicon on Insulating Substrates	673
19. Structure of Metal/Si Interfaces	723
20. Barrier Heights and Contact Resistances, Metal	799
21. Barrier Heights and Contact Resistances: Slicide	827
22. Surface Structure	847
23. Etching Rates	855
24. Rapid Thermal Annealing	885
25. Gettering Techniques	907
26. Polycrystalline Silicon	921
27. Silicon-Based Multilayers	985
28. Silicon Oxides: Optical functions	1007
29. Silicon Nitride: Optical Functions	1029
30. Metal Silictdes: Miscellaneous Aspects	1037
31. Defect Related Failure in Device Structures	1059
Subject Index	1071
