

CONTENTS

Section I : STRUCTURAL, ANALYTICAL AND PREPARATIVE STUDIES

1. Solid State Chemistry	3
2. The Stoichiometry of Reactions by Volumetric Methods	12
3. More Advanced Techniques and Measurements	21
4. Group Chemistry: Reactions and Preparations of Compounds of <i>s</i> - and <i>p</i> -Block Elements	31
5. Transition Metal Chemistry: Reactions and Preparations	47

Section II : ADVANCED PREPARATIVE AND STRUCTURAL TECHNIQUES

6. Infrared Spectroscopy	62
7. High-Temperature Preparations	73
8. Vacuum-Line Preparations	78
9. Inert-Atmosphere Technique	89
10. Non-Aqueous Solvents	96
11. Element-Organic Chemistry	106
12. Electrolytic Preparations	122
13. Inorganic Polymers	127
14. High-Pressure Techniques	135
15. Ultraviolet and Visible Spectroscopy	139
16. Magnetochemistry	146
17. X-Ray Powder Photography	154
18. Electrical Conductivity	160
19. Optical Isomerism in Inorganic Complexes	163
