

## CONTENTS

1. Wave Mechanics and the Quantum Theory	1
2. The Quantum Numbers and Atomic Orbitals	32
3. Atomic Spectra and the Periodic Table	61
4. Valency	106
5. Directed Valence	144
6. The Metallic Bond	179
7. Molecular Spectra (1)	205
8. Molecular Spectra (2)	227
9. Raman Spectra, Microwave Spectra, and Magnetic Resonance Spectra	249
10. The Determination of Internuclear Distances by the Diffraction of X-rays, Electrons, and Neutrons	271
11. Dipole Moments, Bond Lengths, and Bond Energies	300
12. Crystal Structures	340
13. Hydrogen	363
14. The Alkali Metals	399
15. Sub-Group II N: The Alkaline Earth Metals	418
16. Sub-Group II T: The Transition Metals Zinc, Cadmium, and Mercury	455
17. Sub-Group III N: Boron, Aluminium, Gallium, Indium, and Thallium	487
18. Sub-Group IV N: Carbon, Silicon, Germanium, Tin, and Lead	569
19. Sub-Group V N: Nitrogen, Phosphorus, Arsenic, Antimony, and Bismuth	646
20. Sub-Group V N (continued): Phosphorus, Arsenic, Antimony, and Bismuth	705
21. Sub-Group VI N: Oxygen, Sulphur, Selenium, and Tellurium	776
22. Sub-Group VI N (continued): Selenium, Tellurium, and Polonium	862
23. Sub-Group VII N: Fluorine, Chlorine, Bromine, and Iodine	894
24. The Transition Elements	940
25. The Carbonyls, Carbonyl Hydrides, Carbonyl Halides, Nitrosyls, and $\pi$ -Complexes of the Transition Metals	1075
26. The Lanthanons and Actinons	1124
Appendix	1140
Author Index	1149
Subject Index	1152
