

## CONTENTS

Preface	V
1. An Approach to Inorganic Chemistry	1
2. The Atomic Nucleus: Genesis of the Elements	5
3. Radiochemistry	31
4. Electronic Structure of Atoms. The Periodic Table	42
5. Valency	80
6. Structure and Shape of Molecules	117
7. The Solid State	135
8. Chemical Thermodynamics	160
9. Chemical Kinetics	181
10. Acids and Bases	190
11. Hydrogen	207
12. The Hydrides	214
13. The Inert Gases (Group 0)	236
14. The Alkali Metals (Group IA)	241
15. Beryllium, Magnesium and the Alkaline Earth Metals (Group IIA)	250
16. Boron and Aluminium	260
17. Gallium, Indium and Thallium (Group IIIB)	273
18. Carbon and Silicon	279
19. Germanium, Tin and Lead (Group IVB)	299
20. Nitrogen and Phosphorus	309
21. Arsenic, Antimony and Bismuth (Group VB)	333
22. Oxygen, Sulphur, Selenium Tellurium and Polonium (Group VIB)	341
23. The Oxides	360
24. The Halogens (Group VIIB)	368
25. The Halides	385
26. The Lanthanides, Scandium and Yttrium (Group IIIA)	400
27. The Actinides	410
28. Titanium, Zirconium and Hafnium (Group IVA)	423
29. Vanadium, Niobium and Tantalum (Group VA)	432
30. Chromium, Molybdenum and Tungsten (Group VIA)	440
31. Manganese, Technetium and Rhenium (Group VIIA)	451
32. Iron, Cobalt and Nickel (Group VIII)	462
33. The Platinum Metals (Group VIII)	474
34. Copper, Silver and Gold (Group IB)	485
35. Zinc, Cadmium and Mercury (Group IIB)	496

36. Complex or Co-ordination Compounds and Ions	505
37. Peroxides and Peroxo Compounds	522
38. Ion Exchange, Solvent Extraction and Partition Chromatography	532
Appendix: The Elements: Atomic Weights and Other Data	539
Index	542
