

CONTENTS

1. Structure of the Atom (Quantum Mechanical and Wave Mechanical Approach)	1
2. Long Form of Periodic Table and its Extention	53
3. Periodic Properties	77
4. Chemical Bonding	145
5. Radio-isotopes and Radio-chemical Methods of Analysis	260
6. Modern Concepts of Acids and Bases	273
7. Non-Aquous Solvents	291
8. Transition Elements (<i>d</i> -Block Elements)	314
9. Inner Transition Elements (<i>f</i> -Block)-1 Lanthanides	348
10. Inner Transition Elements (<i>f</i> -Block)-2 Actinides	397
11. Coordination Chemistry (1) Basic Concepts	422
12. Coordination Chemistry (2) Isomerism Among Inorganic Complexes	459
13. Coordination Chemistry (3) Metal Ligand Bonding	483
14. Coordination Chemistry (4) Mechanism of Ligand Exchange Reactions	550
References	563
Appendix I	570
Appendix II	571
Appendix III	572
Appendix IV	573
Appendix V	573
Subject Index	576
Errata	579
