

Gas Chromatography

BY WARREN W. BRANDT, DEPARTMENT OF CHEMISTRY,
KANSAS STATE UNIVERSITY, MANHATTAN, KANSAS*

Contents

I. Introduction.....	3
A. Development of Chromatography.....	3
II. Theory.....	4
A. The Theoretical Plate Approach.....	4
B. The Dynamic Approach.....	7
1. Revisions.....	8
C. Current Status.....	9
III. Carrier Gas.....	10
A. Factors Affecting Reflection.....	10
1. Effect on Efficiency.....	11
2. Detector Sensitivity.....	12
3. Other Special Considerations Affecting Choice of Carrier Gas.....	12
B. Selection of the Best Flow Rate.....	13
C. The Quantitative Importance of Flow Rate Control.....	14
D. Measurement of Flow Rate.....	14
IV. Sample Introduction.....	15
A. Theory.....	15
B. Equipment for Special Purposes.....	19
C. Stream Splitting.....	21
D. Preparative Scale Sample Injection.....	22
V. Columns.....	23
A. Packed Columns.....	23
1. The Solid Support.....	23
(a) Particle Size.....	24
(b) Surface Area.....	24
(c) Activity of the Solid Support.....	25
(d) Pretreatment.....	26
(e) The Packing Process.....	27

* Present address: Virginia Polytechnic Institute, Blacksburg, Virginia

2. Liquid Phases.....	27
(a) The Factors Influencing the Selection of a Liquid Phase.....	28
(b) Temperature Effects.....	29
B. Open-Tubular Columns.....	29
1. Comparison of Efficiency with Packed Columns.....	30
2. Problems Encountered in the Use of Open-Tubular Columns.....	31
3. The Amount of Liquid Phase.....	32
C. Glass Bead Columns.....	33
VI. Detectors.....	34
A. Thermal Conductivity.....	36
1. Principle of Operation.....	36
2. Factors Affecting Sensitivity.....	37
(a) Geometry.....	37
(b) Sensing Elements.....	38
3. Precautions.....	38
B. Gas Density Meter.....	39
C. Ionization Detectors.....	41
1. Argon Ionization Detector.....	41
2. Flame Ionization Detector.....	44
3. Photo Ionization Detector.....	47
4. Electron Impact Detector.....	47
5. Electron Capture Detector.....	47
6. Other Ionization Detectors.....	48
D. Coulometric Methods.....	48
E. Mass Spectrometric Detection.....	49
F. Other Possibilities.....	50
VII. Special Techniques.....	50
A. High Temperature Operation.....	50
B. Programmed Temperature Operation.....	52
C. Preparative Scale Operation.....	55
D. High Speed Operation.....	59
VIII. Applications.....	61
A. Gases.....	61
1. The Elemental Gases.....	61
2. Nitrogen Oxides.....	62
3. Highly Reactive Gases.....	62
B. Metal Halides.....	63
C. Metal Chelates.....	65
D. Phosphorus Compounds.....	65
E. Water.....	66
F. Hydrides.....	66
IX. Evaluation of Chromatograms.....	67
A. Measurement.....	68
B. Qualitative Analysis.....	69
C. Quantitative Analysis.....	70
X. Conclusion.....	71
XI. References.....	71
