

CONTENTS

Part One

1. Crystallization		3
2. Melting point		8
3. Distillation		9
4. Chromatography		15
5. Infrared and ultraviolet spectroscopy		25
6. Nuclear magnetic resonance spectroscopy		48

Part Two

	experiment	
1. Thin layer and gas liquid chromatography	1-6	59
2. Electrophilic addition to alkenes	7-12	64
3. Nucleophilic addition to carbonyl compounds	13-14	71
4. Nucleophilic substitution of saturated compounds	15-19	77
5. Substitution reactions of acyl compounds	20-24	86
6. Detection of amines (and alcohols)	25-26	95
7. The identification of unknown organic compounds	27-29	99
8. Electrophilic aromatic substitution (nitration)	30-33	102
9. Electrophilic aromatic substitution (bromination)	34-37	106
10. The formation and reactions of diazonium salts	38-41	109
11. The formation and reactions of Grignard reagents	42-44	112
12. Selective reduction of carbonyl compounds with metal hydrides	45-46	115
13. The condensation of carbonyl compounds with carbanions	47	118
14. A kinetic study	48	121
15. Nuclear magnetic resonance spectroscopy	49-51	124

Part Three

The identification of organic compounds		143
INDEX		169
