

## CONTENTS

Chapter I	
I. The properties of the halogens	19
II. Main characteristics of organic halogen compounds	21
III. Preparation of organic chlorine bromine and iodine compounds	23
IV. Preparation of organic fluorine compounds	33
V. Reactions of organic halogen compounds	38
Chapter II	
I. General concepts	53
II. Decomposition methods	54
III. Reactions suitable for non-selective detection of chloride bromide and iodide ions	60
IV. Reactions suitable for specific detection of halide ions	65
V. Reactions and methods suitable for direct detection of organic halogen compounds	78
VI. Analysis of organic halogen compounds on the basis of their derivatives	80
VII. Instrumental methods	81
VIII. Reactions suitable for determination of the position of the halogen atom in a molecule	82
References	82
Chapter III	
I. Methods for analysis	86
II. Methods for the determination of chloride bromide and iodide ions	98
III. Methods for the liberation of the chlorine bromine and iodine content of organic compounds	112
IV. Some methods for the determination of the chlorine bromine and iodine content of organic compounds	118
Chapter IV	
I. Methods for the determination of fluoride ions	139
II. Pretreatment of organic compounds before determination of the fluorine content	149
III. Methods descriptions of some methods suitable for the determination of fluorine in organic Compounds	157
IV. Detailed descriptions of some methods suitable for the determination of fluorine in organic compounds	157
Chapter V	
I. General review of the methods	168
II. Determination methods	177
III. Methods for the ultramicro determination of the halogen content of organic compounds	180
Chapter VI	
I. Qualitative methods	188
II. Quantitative methods	197
References	200
Chapter VII	
I. Determination of carbon and hydrogen	203

II. Determination of nitrogen	207
III. Determination of oxygen	207
IV. Determination of sulphur	209
V. Determination of other elements	210
References	211
Chapter VIII	
Physical constants of organic halogen compounds of general pharmaceutical and industrial importance	213
Formula index	278
Subject index	287
