

## CONTENTS

1. Introduction	1
2. General Properties of Organometallic Complexes	29
3. Metal Alkyls, Aryls, and Hydrides and Related $\sigma$ -Bonded Ligands	53
4. Carbonyls, Phospine Complexes, and Ligand Substitution Reactions	87
5. Complexes of $\pi$ -Bound Ligands	125
6. Oxidative Addition and Reductive Elimination	159
7. Insertion and Elimination	183
8. Nucleophilic and Electrophilic Addition and Abstraction	207
9. Homogeneous Catalysis	235
10. Physical Methods in Organometallic Chemistry	275
11. Metal-Ligand Multiple Bonds	309
12. Applications of Organometallic Chemistry	343
13. Clusters and the Metal-Metal Bond	379
14. Applications to Organic Synthesis	417
15. Paramagnetic, High-Oxidation-State, and High-Coordination-Number Complexes	463
16. Bioorganometallic Chemistry	491
Index	539
