

CONTENTS

	Page
I. Chemical Shift Theory	1
1. Ab Initio Calculations of Phosphorus Chemical Shielding	3
II. Conformational Analysis of Phosphorus-Containing Ring Systems	15
2. Application of Various ^{31}P NMR Techniques in Conformational Studies of 1,3-Dithianes and Their Oxo- and Seleno-Analogues Containing Organophosphorus Substituents at the Anomeric Carbon Atom	17
3. Phosphorus (III) and Phosphorus (V) Heterocyclic Compounds	27
4. Use of J_{HP} Values to Determine the Conformations of Saturated Six-Membered Ring Containing Phosphorus	41
III. Compounds with Three-, Four-, and Five-Coordinate Phosphorus (Saturated)	55
5. Elucidation of Small Ring and Macrocyclic Structures Using ^{31}P NMR	57
6. $1\lambda^5, 3\lambda^5$ -Diphosphates and Phosphorus-Fluoro-Ylides	69
7. Identification and Structural Elucidation of the Novel Polyphosphide LiH_5P_8	81
8. NMR Studies of Phosphorus-Substituted Allenes, Acetylenes, and Dienes	93
9. Applications of ^{31}P NMR Spectroscopy in Cyclophosphazene Chemistry	109
10. ^{31}P , ^{13}C , and ^{15}N NMR Studies of Aryl-Substituted λ^5 Phosphazenes, Phosphine Oxides, and Phosphines	115
IV. Low-Coordinate Phosphorus Compounds	129
11. From Donor-Stabilized Metaphosphate Derivatives to Heterocyclic Phosphorus Compounds Using NMR as a Guide	131
12. The Cyclotetramerization of Phosphaalkynes and Its ^{31}P NMR Spectroscopic consequences	147
13. ^{31}P NMR Spectroscopic Investigations of Low-Coordinated Multiple Bonded PN Systems	159
14. ^{31}P NMR in Studies of Some One- and Two-Coordinated Phosphorus Compounds	175
15. The Bis(Diisopropylamino)Phosphino Group: A wonderful Tool For the Stabilization and NMR Characterization of Highly Reactive Species	189
V. Metal Complexes of phosphorus Ligands	201
16. Transition Metal-Promoted Intramolecular [4+2] Diels-Alder Cycloadditions of Phospholes with Dienophilic Ligands	203
17. Applications of ^{31}P NMR Spectroscopy in the Investigation of the Dynamic Behavior of Five-Membered Ether-Phosphine Metal Complexes	215
18. ^{31}P NMR studies on Transition-Metal Complexes Derived from Phosphaalkynes, Phosphirenes, and Phosphiranes	229
19. Applications of ^{31}P Shift and P-P Coupling Data in the Chemistry of Organometallics Containing Two or More Phosphorus Atoms	243
VI. Biological Phosphorus Systems	253
20. Stereochemical Analysis of Chiral Inorganic [^{16}O , ^{17}O , ^{18}O]-Thiophosphate	255
21. ^{31}P NMR of Nucleic Acids	267
22. ^{31}P NMR in the Analysis of Extracted Tissue Phospholipids	283
VII. Mechanism Elucidation in Phosphorus Chemistry	295
23. ^{31}P NMR Detection and Analysis of Wittig Intermediates	297
24. Applications of Oxygen Isotopes and ^{31}P NMR Spectroscopy in Stereochemical and Mechanistic Studies	315
25. Reversible Coordination Isomerism of Organophosphorus Compounds	333
VIII. Analytical and Interpretive Aspects	345
26. P-P and P-H Correlation Experiments for the Analysis of Mixtures of Phosphorus Compounds	347

27. Industrial ^{31}P NMR Spectroscopy: Advances and Applications	361
28. ^{31}P NMR Spectroscopy in the Analysis of Coal Materials	373
29. Fully Coupled Spectra in the Analysis of Reaction Mixtures	385
30. NMR-Controlled Titrations of Phosphorus-containing Acids and Bases in Protolysis and Complex Formation	395
IX. NMR with Solid Phosphorus-Containing Systems	411
31. ^{31}P High-Resolution Solid-State NMR Studies of Thiophosphoroorganic Compounds	413
32. Characterization by CP/MAS ^{31}P NMR of Solids Used as Trapping Agents for Transient, Electrophilic Phosphorus Species	427
33. Magic-Angle Spinning Frequency-Dependent NMR Spectra Arising from a Pair of Crystallographically Equivalent Phosphorus Nuclei	441
Index	451
