	Page
1. High-Energy Processes in Organometallic Chemistry in Perspective	1
2. Gas-Phase Organometallic Ion Chemistry	11
3. Gas-Phase Transition Metal Cluster Chemistry	43
4. Photofragmentation of Transition Metal Cluster Complexes in the Gas Phase	70
5. Coordinatively Unsaturated Metal Carbonyls in the Gas Phase via Time-Resolved Infrared Spectroscopy	81
6. Primary and Secondary Processes in Organometallic Photochemistry	99
7. Infrared Spectroscopy of Organometallic Intermediates	110
8. Reactive Intermediates in the Thermal and Photochemical Reactions of Trinuclear Ruthenium Carbonyl Clusters	123
9. Photochemical Reactions Between Transition Metal Complexes and Gases at High Pressures	139
10. Electrochemiluminescence of Organometallics and Other Transition Metal Complexes	155
11. Electron Spin Resonance Studies of Primary Processes in the Radiolysis of Transition Metal Carbonyls	169
12. Sonochemistry of Organometallic Compounds	191
13. Acceleration of Synthetically Useful Heterogeneous Reactions Using Ultrasonic Waves	209
14. Preparation of Highly Reactive Metal Powders: Some of Their Uses in Organic and Organometallic Synthesis	223
15. Living Colloidal Metal Particles from Solvated Metal Atoms: Clustering of Metal Atoms in Organic Media	246
16. Activation of Carbon-Hydrogen Bonds by Metal Atoms	260
17. Highly Reactive Organosamarium Chemistry via Metal Vapor and Sm(II) Syntheses	278
18. Photon- and Ion-Beam-Induced Reactions in Metallo-organic Films: Microchemistry to Microelectronics	290
19. Plasma and Ion Beam Synthesis and Modification of Inorganic Systems	303
