Preface xi

Acknowledgements xiii

Part I Stereochemical Principles

Chapter 1 Observed molecular geometries in carbon compounds

1.1	Introduction	2
1.2	Idealized geometries for organic compounds	3
1.3	Molecular models	5
1.4	Actual geometries in organic compounds	5
1.5	Summary of Sections 1.1–1.4	10
1.6	Rationalization of deviations from idealized bond angles	10
1.7	Summary of Section 1.6	12
	Problems and Exercises	13

Chapter 2 Bonding in organic compounds

2.1	Introduction	15
2.2	Hydrogen-like atomic orbitals	15
2.3	Chemical bonding	17
2.4	Summary of Sections 2.2–2.3	19
2.5	Hybridization	19
2.6	π -bonds	21
2.7	Delocalized π -systems	22
2.8	Bonding in small-ring compounds	23
2.9	Weak interactions	24
2.10	Summary of Sections 2.4–2.9	25
2.11	Rotations about bonds	25
2.12	Summary of Section 2.11	27
	Problems and Exercises	27

Chapter 3	Symmetry in organic compounds	
3.1	Introduction	29
3.2	Symmetry elements	30
3.2.1	Axis of symmetry	
3.2.2	Plane of symmetry	
3.2.3	Rotation–reflection	
3.2.4	Centre of symmetry	
3.3	Reflection symmetry	33
3.4	Summary of Sections 3.1–3.3	34
3.5	Point groups	35
	Problems and Exercises	38
Chapter 4	Molecular isomerism—I	
4.1	Introduction	39
4.2	Homomers and isomers	40
4.3	Constitutional isomerism	40
4.4	Stereoisomerism	42
4.5	Molecular motion	44
4.6	Conclusions and summary	44
	Problems and Exercises	46
Chapter 5	Molecular isomerism—II. Time scales and energy criteria	
5.1	Introduction	48
5.2	Conformation	49
5.3	Conformational changes and energy barriers	50
5.4	Conformational isomerism	51
5.5	Conformational isomerism and isomerism	52
5.6	Summary of Sections 5.1–5.5	55
5.7	The grey area, and what is meant by readily interconvertible	56
5.7.1	Amide restricted rotation	
5.7.2	Isomerism in biphenyl compounds	
5.7.3	Isomerism in trans-cyclooctene	
5.7.4	Amine inversions	
5.7.5	Facile double bond rotations	
5.8	Summary and conclusion of Section 5.7	60
5.9	Physical techniques and time-scales	60
	Problems and Exercises	64

Part II The Application of Stereochemical Principles

Chapter 6 The conformations of open chain compounds

6.1	Introduction	66
6.2	Physical methods for the determination of conformation	66
6.3	Rotations about unconjugated single bonds	68
6.4	Rotations about conjugated bonds	72
6.4.1	Introduction	
6.4.2	Dienes, conjugated aldehydes and ketones	
6.4.3	Esters, acids, amides and thioamides	
6.4.4	Biphenyls	
6.5	Summary of Sections 6.3–6.5	78
	Problems and Exercises	79

Chapter 7 The conformations of saturated, cyclic systems

7.1	Introduction	80
7.1.1	Summary of Section 7.1	
7.2	The normal rings: cyclohexane and its derivatives	83
7.2.1	Cyclohexane	
7.2.2	Monosubstituted cyclohexanes	
7.2.3	Disubstituted cyclohexanes	
7.2.4	Summary of Section 7.2	
7.3	The normal rings: cyclopentane and its derivatives	92
7.4	The normal rings: cycloheptane	94
7.5	Medium rings: cyclooctane	94
7.6	Small rings	95
7.7	Polycyclic compounds	96
7.7.1	Introduction	
7.7.2	Norbornanes — bridged rings	
7.7.3	Fused-rings; the decalins	
7.7.4	Fused-rings; steroids	
7.8	Summary of Sections 7.3–7.7	100
	Problems and Exercises	101

Chapter 8 Chiral compounds

8.1	Introduction	102
8.2	Molecules with one chiral centre	102
8.3	Molecules with a chiral axis	104
8.4	Molecules with a chiral plane of symmetry	106

8.5	Molecules with two or more chiral centres	106
8.5.1	Introduction	
8.5.2	Molecules with two chiral centres	
8.5.3	Molecules with more than two chiral centres	
8.6	Summary of Sections 8.1–8.5	108
8.7	The manifestations of chirality—the characterization of enantiomers by chiroptical methods	109
8.8	The determination of configuration	113
8.8.1	Chiroptical methods	
8.8.2	Configurations by chemical correlation	
8.8.3	Absolute configuration by calculations and anomalous X-ray diffraction	
8.9	The separation of enantiomers	117
8.10	Summary of Sections 8.7–8.9	118
	Problems and Exercises	119
Chapter 9 Macromolecular stereochemistry		
9.1	Introduction	120
9.2	Hydrocarbon polymers	121
9.3	Peptides and proteins	125
9.4	Polysaccharides	128
9.5	Summary of Sections 9.1–9.4	130
	Problems and Exercises	131

Part III The Stereochemistry of Some Chemical Reactions

Chapter 10 The principles of chemical reactivity		
10.1	Introduction	134
10.2	The thermodynamics and kinetics of chemical reactions	135
10.2.1	The driving force for reactions	
10.2.2	The rates of reactions	
10.2.3	The activation energy	
10.2.4	Reaction profile diagrams	
10.2.5	Competing reactions	
10.2.6	Consecutive reactions and reaction intermediates	
10.3	Selectivity and specificity in chemical reactions	141
Chapter 11 The stereochemistry of substitution reactions		
11.1	The effect of substitution on configuration	144

11.2	The mechanism of inversion of configuration	145
11.3	The mechanism of racemization	149
11.4	Mechanisms of retention of configuration	152
11.5	S_N1 versus S_N2	154
11.6	Summary of Sections 11.1–11.5	156
	Problems and Exercises	156

Chapter 12 The stereochemistry of elimination and addition reactions

12.1	Introduction	158
12.2	Stereospecific and stereoselective anti-eliminations	160
12.3	Stereospecific <i>syn</i> -eliminations	165
12.4	Non-stereoselective eliminations	166
12.5	Regioselectivity—Hofmann and Saytzeff elimination	167
12.6	Elimination versus substitution	168
12.7	Summary of Sections 12.1–12.6	170
12.8	Addition reactions	171
	12.8.1 Anti-additions	
	12.8.2 Syn-additions	
	12.8.3 Summary of Section 12.8	
	Problems and Exercises	175

Chapter 13 Pericyclic reactions

13.1	Introduction	176
13.2	Aromaticity in the context of pericyclic reactions	178
	13.2.1 Huckel aromaticity	
	13.2.2 Anti-Huckel aromaticity	
13.3	Electrocyclic reactions	180
13.4	Cycloaddition reactions	185
13.5	Sigmatropic rearrangements	188
13.6	Summary of Sections 13.1–13.5	192
	Problems and Exercises	193

Chapter 14 Asymmetric reactions — stereodifferentiation reactions

14.1	The creation of chirality in molecules	195
14.2	The nomenclature of asymmetric synthesis	196
	14.2.1 Prostereoisomerism	
	14.2.2 Differentiation	

14.3	The principle of asymmetric synthesis	200
14.4	Enantiodifferentiation	200
	14.4.1 Enantiotopos differentiation	
	14.4.2 Enantioface differentiation	
14.5	Diastereodifferentiation reactions	206
	14.5.1 Diastereotopos differentiation	
	14.5.2 Diastereoface differentiation	
14.6	Absolute asymmetric synthesis	208
14.7	Summary of Sections 14.1–14.6	209
	Problems and Exercises	210
 <i>Appendix 1</i> The <i>R.S.</i> nomenclature		213
 <i>Appendix 2</i> Answers to problems		219
 Suggested further reading		235
