

CONTENTS

I. General Considerations	1
A. Comparison of Methods Used for the Study of Small and Large Molecules	2
B. Distribution Functions of Chain lengths and Composition	12
C. Relation of the Study of Macromolecules in Solution and in Bulk	25
II. The Solubility of Macromolecules	33
A. Formation of Solutions from Species of Low Molecular Weight	33
B. Binary Systems Containing Macromolecules	55
C. Three-Component and Multicomponent Systems Containing Macro molecules	79
III. Configuration and Conformation of Chain Molecules	91
A. The Stercoisomerism of Chain Molecules	93
B. Geometry of Flexible Chains	99
C. Specific Conformations	132
IV. Equilibrium Properties of Dilute Solutions	161
A. The Colligative Properties	161
B. Equilibrium Centrifugation	181
V. Spectroscopy, Optical Activity, and the Scattering of Light and X-Ray	197
A. Absorption Spectroscopy	199
B. Optical Activity	221
C. Light Scattering	243
VI. Frictional Properties of Dissolved Macromolecules	269
A. Linear Translation	270
B. Rotary Diffusion	284
C. Solution Viscosity	298
VII. Polyelectrolytes	315
A. The Expansion of Flexible Polyions	320
B. The Distribution of Counterions	334
C. Thermodynamic Properties	340
D. Transport Properties	356
VIII. Molecular Association	367
A. Association of Macromolecules with Low Molecular Weight Species	369
B. Molecular Aggregation of Macromolecules	392
IX. The Reactivity of Macromolecular Solutions	409
A. Reactions of Polymers with Small Molecules and Ions	410
B. Intramolecular Interaction Effects on Polymer Reactivity	414
C. Reactions of Two Low Molecular Weight Species in the Presence of Polyions	434

D. Behavior of Solutions Containing Reactive and Catalytically Active Macromolecules	437
