LIST OF CONTRIBUTORS	ix
PREFACE	xi
CONTENTS OF OTHER VOLUMES	xiii
<b>1. PHOTOELECTRON SPECTROSCOPY</b>	
C. R. BRUNDLE and M. B. ROBIN	
I. Introduction	2
II. Historical Development and Instrumentation	4
III. Comparison of the Various Techniques for Measuring I.P.'s	9
IV. Relationship between Photoelectron Spectroscopy and the Electronic Structure of Molecules	12
V. Complications in Photoelectron Spectra	26
VI. Applications to Organic Chemistry	35
VII. Conclusions	66
References	67
<b>2. X-RAY DIFFRACTION</b>	
ROBERT F. STEWART and SYDNEY R. HALL	
I. Introduction	74
II. Intensity Measurements and Structure Factor Amplitudes	76
III. The Phase Problem	84
IV. Reliability of Structural Results	101
V. Charge Density and Thermal Motion	115
VI. Concluding Remarks	125
References	125
<b>3. OPTICAL ROTATORY DISPERSION AND CIRCULAR DICHROISM IN ORGANIC CHEMISTRY</b>	
PIERRE CRABBÉ	
I. Introduction	134
II. Definitions	135
III. Solvent and Temperature Effects on RD and CD Curves	140
IV. Functions and Chromophoric Derivatives	143
V. Functional Groups	150
VI. Conclusions	190
References	191
<b>4. THERMOCHEMISTRY</b>	
KENNETH B. WIBERG	
I. Introduction	207
II. Temperature Measurement	208

III. Heats of Combustion	209
IV. Heats of Reaction	211
V. Bond Dissociation Energies: Heats of Formation of Re- active Intermediates	222
VI. Empirical Estimation of Heats of Formation	223
VII. The Classical Mechanical Approach	231
VIII. The Quantum Mechanical Approach	234
IX. Applications of Thermochemical Data	236
References	241
5. MASS SPECTROMETRY	
DUDLEY WILLIAMS	
I. Introduction	247
II. The Mass Spectrometer	248
III. The Width of "Metastable Peaks"	250
IV. Reaction Rates and Internal Energy	253
V. Substituent Effects	257
VI. Ion Structures	263
VII. Structure Elucidation of Natural Products	275
VIII. Summary	286
References	287
6. ELECTRON SPIN RESONANCE SPECTROSCOPY	
GLEN A. RUSSELL	
I. Introduction	293
II. Synthesis of Electron Spin Labels in Organic Molecules	294
III. Side Reactions in the Synthesis of Spin Labels	306
IV. Hyperfine Splitting by Hydrogen Atoms to a Paramagnetic Center	312
V. Hyperfine Splitting by Atoms with Unpaired Spin Density	316
VI. Hyperfine Splittings by Atoms Alpha to a Spin Label	319
VII. Long Range Hyperfine Splittings by Hydrogen Atoms	324
VIII. Long Range Hyperfine Splittings by Atoms Other than Hydrogen	334
IX. Conclusions	335
References	335
7. CONFIGURATION AND CONFORMATION BY NMR	
F. A. L. ANET and RAGINI ANET	
1. Introduction	344
II. Time-Dependent (Averaging) Effects in NMR and the De- termination of Kinetic Parameters	345
III. Determination of the Number and Relative Amounts of Enantiomers, Diastereomers, and Geometrical Isomers	353

<b>IV. Determination of the Number and Relative Amounts of Conformers</b>	356
<b>V. Use of Symmetry Properties</b>	362
<b>VI. Use of the Chemical Shift</b>	375
<b>VII. Use of Coupling Constants</b>	386
<b>VIII. Use of Nuclear Overhauser Effects</b>	398
<b>IX. Conformational and Configurational Barriers</b>	406
<b>References</b>	408
<b>AUTHOR INDEX</b>	421
<b>SUBJECT INDEX</b>	460
