LIST OF CONTRIBUTORS	ix
PREFACE	xi
CONTENTS OF OTHER VOLUMES	xiii
<b>1. ELECTRON DIFFRACTION</b>	
<b>J. KARLE</b>	
I. Introduction	1
II. Instrumentation	3
III. Theory and Analysis	6
IV. Reading an Electron Diffraction Paper	14
V. Regularity of Bond Lengths	20
VI. Single Bonds	23
VII. Single and Double Bonds	28
VIII. Conjugated Systems	39
IX. Triple Bonds	49
X. Conformers	51
XI. A Variety of Topics	60
XII. Conclusions	68
References	68
<b>2. SPIN SATURATION LABELING</b>	
<b>J. W. FALLER</b>	
I. Introduction	75
II. Theory	76
III. Applications and Examples	81
IV. Measurement Techniques	90
V. Sources of Error	93
VI. Practical Aspects	95
References	96
<b>3. CHEMICALLY AND ELECTROMAGNETICALLY INDUCED DYNAMIC NUCLEAR POLARIZATION</b>	
<b>RONALD G. LAWLER AND HAROLD R. WARD</b>	
I. Introduction	99
II. Overhauser and Related Effects	103
III. Chemically Induced Dynamic Nuclear Polarization (CIDNP)	109
References	144
<b>4. ION CYCLOTRON RESONANCE SPECTROSCOPY</b>	
<b>JOHN I. BRAUMAN AND LARRY K. BLAIR</b>	
I. Basic Principles of Ion Detection	152
II. The Ion Cyclotron Double Resonance Technique for Studying Ion- Molecule Reactions	153

III. Interpretation of the Double Resonance Experiment	154
IV. Applications	155
V. Thermochemical Quantities	156
VI. Proton Transfer Reactions. Double Resonance Spectra	157
VII. Acidities from Proton Transfer	161
VIII. Reaction Pathways	162
IX. Structures of Ions	163
X. Concluding Remarks	165
References	166
5. NUCLEAR QUADRUPOLE RESONANCE IN ORGANIC AND METALLOORGANIC CHEMISTRY	
M. G. VORONKOV and V. P. FESHIN	
I. Introduction	169
II. Distribution and Assignment of Frequencies in the Spectral Bandwidth	174
III. The Nature of the Chemical Bond	176
IV. The Correlation of NQR Frequencies of the Type RX, RZX, and RR'R'MX with Substituent Inductive Constants and with Chemical and Physical Properties	177
V. Transmission of Electronic Effects Across Saturated Carbon and Heteroatomic Systems	184
VI. Electronic Effects of Alkyl Groups	191
VII. Alicyclic Compounds	195
VIII. Aromatic Systems	199
IX. Aaliphatic Compounds	204
X. Heterocyclic Compounds	205
XI. Phosphorus Compounds	209
XII. Sulfur Compounds	210
■ XIII. Intra- and Intermolecular Coordination in Metalloorganic Compounds	211
XIV. Molecular Complexes	216
XV. Polymeric Compounds	222
XVI. Some Other Areas of Application of the NQR Method	223
XVII. Conclusion	224
References	224
6. MÖSSBAUER SPECTRA OF ORGANOMETALLICS	
N. W. G. DEBYE and J. J. ZUCKERMAN	
I. Theory	235
II. Applications	250
References	278
7. AUTOMATED CHEMICAL STRUCTURE ANALYSIS SYSTEMS	
SHIN-ICHI SASAKI	
I. Introduction	285
II. Structure Determination of Alkanes with Monomethyl Side Chain	286
III. Structure Determination of Oligopeptides	289

IV. Structure Determination of Aliphatic Ketones	<b>293</b>
V. Structure Determination of Aliphatic Ethers	<b>299</b>
VI. Construction of Molecular Structure from Suitable Fragments	<b>304</b>
References	<b>320</b>
Appendix to Chapter 5. NEWEST REPORTS ON NQR APPLICATIONS IN ORGANIC AND METALLOORGANIC CHEMISTRY	
M. G. VORONKOV and V. P. FESHIN	
Text	<b>323</b>
References	<b>337</b>
AUTHOR INDEX	<b>341</b>
SUBJECT INDEX	<b>361</b>
