

CONTENTS

SECTION 1. BASIC THERMODYNAMIC PRINCIPLES	1
Chapter 1. Chemical Thermodynamic Concepts	3
Chapter 2. Heat Capacity and Enthalpy of Transition	17
Chapter 3. Thermochemistry	61
Chapter 4. Evaluation of Entropy	87
Chapter 5. Gibbs Energy and Chemical Equilibrium	115
Chapter 6. Methods for Estimating Thermodynamic Quantities	140
Chapter 7. Application to Industrial Problems	155
SECTION II. THERMAL AND THERMOCHEMICAL PROPERTIES IN THE IDEAL GASEOUS STATE FROM 298° TO 1000°K	198
Chapter 8. Thermodynamic Symbols, Constants, Methods of Calculation, and Data for Elements and Selected Inorganic Compounds	199
Chapter 9. Chemical Thermodynamics of Hydrocarbon Compounds	235
Chapter 10. Chemical Thermodynamics of Compounds of Carbon, Hydrogen, and Oxygen	405
Chapter 11. Chemical Thermodynamics of Nitrogen Compounds	457
Chapter 12. Chemical Thermodynamics of Halogen Compounds	486
Chapter 13. Chemical Thermodynamics of Organic Sulfur Compounds	558
SECTION III. THERMAL AND THERMOCHEMICAL DATA AT 298°K	629
Chapter 14. Selected Values of Enthalpy of Formation and Entropy of Organic Compounds at 298°K	631
APPENDICES	771
REFERENCES	799
COMPOUND INDEX	847
SUBJECT INDEX	855
