<b>1 Some Basic Notions in Solid State Physics . . . . .</b>	<b>1</b>
1.1 The Conductance Equation . . . . .	2
1.2 Electrons and Holes . . . . .	3
1.3 Energy Bands . . . . .	3
1.4 Intrinsic and Extrinsic Conduction . . . . .	6
1.5 The Fermi-Dirac Distribution . . . . .	10
1.6 Donors and Acceptors . . . . .	15
1.7 The Intrinsic Semiconductor . . . . .	19
1.8 The Impurity Semiconductor . . . . .	21
1.9 Photoconductivity. Trapping Effects . . . . .	23
1.10 Surface States . . . . .	28
1.11 Dielectric Properties. Impedance Relationships . . . . .	33
1.12 Energy Transfer and Electron Transfer . . . . .	38
1.13 Mobility . . . . .	39
1.14 Application to Organic Solids . . . . .	42
<b>2 Observables . . . . .</b>	<b>44</b>
2.1 Dark Conductance . . . . .	44
2.2 Dark Conductance as a Function of a Variable . . . . .	54
<i>State of the material</i> . . . . .	55
<i>Direction in a single crystal</i> . . . . .	55
<i>Dimensions of the sample</i> . . . . .	55

<i>Magnitude of the applied voltage</i>	56
<i>Frequency of the applied voltage</i>	57
<i>Time after applying a voltage</i>	57
<i>Temperature</i>	57
<i>Pressure.</i>	58
<i>Nature of the ambient atmosphere</i>	59
<i>Nature of the electrode material.</i>	59
<i>Position of the electrodes.</i>	59
2.3 Drift Mobility	59
2.4 Dielectric Properties	68
2.5 Hall Effect.	69
2.6 Thermoelectric Effects.	72
2.7 Catalysis	78
2.8 Electron Spin Resonance	81
2.9 Electroluminescence	88
2.10 Rectification	89
2.11 Space Charges	90
2.12 Electron Affinity	91
2.13 Ionization Energy	94
2.14 Contact Potential.	95
2.15 Ferroelectric, Piezoelectric, and Pyroelectric Effects	96
2.16 Absorption of Light	97
2.17 Photoluminescence	98
2.18 Photoemission	99
2.19 Photoconduction	100
2.20 Photovoltaic Effects.	104
<b>3 Sample Preparation.</b>	<b>122</b>
3.1 Purification	122
3.2 Single Crystals	153
3.3 Cast Slabs	167
3.4 Compacted Powders	168
3.5 Thin Films	174
3.6 Liquids and Melts	183
3.7 Contacts	185
3.8 Effect of Gases; Adsorption	197
<b>4 Band Theory of Molecular Crystals</b>	<b>225</b>
4.1 Introduction	225
4.2 The One-Electron Approximation	226

4.3	Calculation of the Velocity Components $v_i$ and the Mean Square Velocity ( $v^2$ ) . . . . .	230
4.4	Mobilities . . . . .	248
4.5	Scattering. Polarons . . . . .	256
4.6	The Validity of the Band Theory . . . . .	267
<b>5</b>	<b>Excited States of Molecular Crystals . . . . .</b>	<b>273</b>
5.1	Introduction . . . . .	273
5.2	Types of Excited Electronic States of Insulators in First Approximation. . . . .	273
5.3	Relations among the Descriptions of Excited States in First Approximation . . . . .	274
5.4	Wannier's Treatment of Excited States . . . . .	279
5.5	Merrifield's Treatment of Excited States . . . . .	281
5.6	Pople's Treatment of Excited States . . . . .	283
5.7	Mixing of Neutral and Ionized States . . . . .	284
5.8	Excitons. . . . .	288
5.9	The Optical Spectra of Molecular Crystals . . . . .	296
5.10	Transitions from Crystal States which Are Obtained by Optical Excitation . . . . .	298
5.11	Local (Regional) Excitation in Molecular Crystals . . . . .	301
5.12	The Transfer of Electronic Energy in Molecular Crystals . . . . .	303
5.13	The Trapping of Excitation Energy by Guest Molecules in a Host Crystal . . . . .	311
5.14	Exciton Collisions . . . . .	312
<b>6</b>	<b>Ionized States . . . . .</b>	<b>331</b>
6.1	Introduction . . . . .	331
6.2	Energy of the Ionized States of a Molecular Crystal Containing Positive and Negative Ions Separated by a Large Distance. Considered Classically . . . . .	331
6.3	Entropy Effects . . . . .	333
6.4	Energy Associated with a Single Charge in a Molecular Crystal . . . . .	336
6.5	Energy Associated with an Ion Pair in a Molecular Crystal	346
6.6	Ionization Energy of an Organic Molecule . . . . .	350
6.7	Ionization Energy of a Molecular Crystal . . . . .	351
6.8	Electron Affinity Energies of Organic Molecules . . . . .	353
6.9	Electron Affinity Energies of Molecular Crystals . . . . .	356

6.10 Modes of Carrier Formation in the Dark . . . . .	358
6.11 Modes of Charge Carrier Formation in the Light . . . . .	376
<b>7 Tunneling and Hopping Models. . . . .</b>	<b>421</b>
7.1 Introduction . . . . .	421
7.2 Theory of an Electron in a Region Bounded by Potential Barriers. . . . .	421
7.3 The Tunneling Model of Dark and Photoconduction in Molecular Crystals . . . . .	425
7.4 The Relation between the Tunnel Model and the Band Model	438
7.5 The Hopping Model . . . . .	439
<b>8 Review of Published Data . . . . .</b>	<b>448</b>
8.1 Introduction. . . . .	448
8.2 Molecular Crystals . . . . .	452
8.3 Complex Metal Compounds . . . . .	458
8.4 Charge Transfer Complexes . . . . .	460
8.5 Free Radicals and Free Radical Salts . . . . .	467
8.6 Long Chain Compounds and Polymers . . . . .	471
8.7 Organic Dyes . . . . .	484
8.8 Biological Materials . . . . .	492
8.9 Liquids and Glasses . . . . .	504
8.10 Seebeck Coefficients. Thermoelectric Effects . . . . .	512
8.11 Photoconductivity Data . . . . .	514
8.12 Photovoltaic Data . . . . .	516
8.13 Contact Potentials . . . . .	517
8.14 Epitome. . . . .	518
<b>9 Semiconductivity and Structure . . . . .</b>	<b>525</b>
9.1 Introduction . . . . .	525
9.2 Anisotropy of Semiconductor Parameters . . . . .	526
9.3 Crystallographic Transitions . . . . .	530
9.4 Fusion. Amorphous Structures . . . . .	532
9.5 Change from Saturated to Unsaturated Molecules . . . . .	534
9.6 Change in the Size of an Unsaturated Molecule . . . . .	535
9.7 Substitution in the Periphery of a Molecule . . . . .	543
9.8 Substitution in the Center of a Large Molecule . . . . .	544
9.9 Other Substitution . . . . .	545
9.10 Isomerization . . . . .	545

## CONTENTS

xvii

9.11 Doping . . . . .	548
9.12 Charge Transfer Complexes . . . . .	548
9.13 Physical Defects . . . . .	553
<b>10 Space Charge Effects . . . . .</b>	<b>558</b>
10.1 Introduction. Space Charges and Surface Charges . . . . .	558
10.2 Space Charge Limited Currents . . . . .	566
10.3 Glow Curves and Conduction Aftereffects . . . . .	587
10.4 Photovoltaic Effects. . . . .	595
10.5 Ferroelectric, Piezoelectric. and Pyroelectric Phenomena . .	603
10.6 Electrets. . . . .	616
10.7 Plasma . . . . .	621
10.8 Summary . . . . .	624
<b>11 Retrospect. Outlook. and Speculations. Summary . . . . .</b>	<b>632</b>
11.1 Retrospect . . . . .	632
11.2 Outlook and Speculations . . . . .	633
<i>p-njunctions</i> . . . . .	633
<i>Negative resistance devices</i> . . . . .	634
<i>Transducers and molecular impedances</i> . . . . .	637
<i>Adsorption and catalysis</i> . . . . .	638
<i>Biological aspects</i> . . . . .	638
<i>Photophenomena</i> . . . . .	640
<i>Superconductivity</i> . . . . .	642
<i>Power conversion</i> . . . . .	643
<i>Other possibilities</i> . . . . .	644
11.3 Summary. The Present State of the Art . . . . .	644
<b>Reference Tables . . . . .</b>	<b>651</b>
Tables 5.1, 5.2, 6.6 to 6.10; 8.2 to 8.8; 8.11 to 8.19	
List of Tables of Data (Table 8.19)
