

CONTENTS

PREFACE	iii
CONTRIBUTORS TO THIS VOLUME	v
GLOSSARY AND ABBREVIATIONS	xvii
Chapter 0. INTRODUCTORY SURVEY	1
Manuel M. Baizer	
I. General Considerations	1
II. Experimental Results	3
III. Concluding Remarks	6
References	8
SECTION A: PRINCIPLES AND METHODS	
Chapter I. BASIC CONCEPTS	13
Georges Cauquis	
I. Introduction	14
II. Fundamental Electrode Phenomena	17
III. Intervention of Coupled Chemical Reactions	44
IV. Aspects of the Electrochemical Reaction That Are Due to Its Heterogeneous Nature	56
V. Relation between Structure and Electrochemical Properties	74
VI. The Role of the Reaction Medium	80
References	86
Chapter II. METHODS FOR THE ELUCIDATION OF ORGANIC ELECTROCHEMICAL REACTIONS	93
Georges Cauquis and Vernon D. Parker	
I. Introduction: Electrochemical and Nonelectrochemical Methods	94
II. Methods Involving Mass Transfer by Convection-Diffusion	96
III. Methods Involving Mass Transfer by Diffusion	105
IV. Coulometry	133
V. Potentiometry	136
VI. Correlations among the Several Electrochemical Methods; The Choice of Methods	137

VII.	Diverse Applications of Ultraviolet, Visible, and Infrared Spectroscopy	139
VIII.	Application of Electron Paramagnetic Resonance (EPR OR ESR) References	145 149
Chapter III. RELATION BETWEEN MICRO AND MACRO PHENOM- ENA		
	Petr Zuman	155
I.	Introduction	155
II.	Factors Affecting Differences between Micro and Macro Results	156
III.	Polarographic vs. Macro Results	156
IV.	Summary and Recommendations	160
	References	160

SECTION B: PRACTICAL PROBLEMS

Chapter IV. PRACTICAL PROBLEMS IN ELECTROLYSIS	165	
H. Lund and P. Iversen		
I.	Introduction	166
II.	Cells for Electrolysis	169
III.	Diaphragm Materials	195
IV.	Electrode Materials	196
V.	Reference Electrodes	202
VI.	Solvents for Electrolysis	207
VII.	Electrolytes	227
VIII.	Voltage Sources and Coulometers	232
IX.	Practical Hints	233
	References	236

SECTION C: SYNTHETIC AND MECHANISTIC ASPECTS OF CATHODIC REACTIONS OF ORGANIC COMPOUNDS CLASSIFIED BY ELECTROPHORES

Chapter V. CATHODIC REACTIONS OF HYDROCARBONS	253	
Roy Dietz		
I.	Introduction	253
II.	Formation of Anion Radicals	254
III.	Reactions of Anion Radicals	256
IV.	Formation and Reactions of Dianions	267
V.	Reduction of Carbonium Ions	270
	References	271

Chapter VI.	ELECTROCHEMICAL REDUCTION OF ORGANIC HALIDES	279
	M. R. Rifi	
I.	Introduction	279
II.	Reduction Products	280
III.	Mechanism of Reduction	280
IV.	Experimental	301
V.	Summary	301
VI.	Conclusion	309
	References	310
Chapter VII.	CATHODIC REDUCTION OF NITRO COMPOUNDS	315
	H. Lund	
I.	Introduction	316
II.	Aliphatic Nitro Compounds and Derivatives	316
III.	Aromatic Nitro Compounds and Derivatives	325
IV.	N-Nitramines and Nitrosamines	338
	References	339
Chapter VIII.	SATURATED CARBONYL COMPOUNDS AND DERIVATIVES	347
	L. G. Feoktistov and H. Lund	
I.	Introduction	348
II.	Reduction to Alcohols	348
III.	Reduction to Glycols and Pinacols	355
IV.	Stereochemical Data Relating to the Pinacol Reduction	366
V.	Reduction to Hydrocarbons	367
VI.	Reduction to Organometallic Compounds	371
VII.	Reduction Mechanisms	372
VIII.	Structure and Reactivity	375
IX.	Carbonyl Derivatives	376
	References	383
Chapter IX.	α , β -UNSATURATED CARBONYLS	399
	Manuel M. Baizer	
I.	Introduction	399
II.	Electrode Mechanisms	400
III.	Synthetic Aspects	404
IV.	Quinones	408
	References	409
Chapter X.	CARBOXYLIC ACIDS AND DERIVATIVES	413
	L. Ebersson	
I.	Introduction	413
II.	Cathodic Reduction of Carboxylic Acids	414

III.	Cathodic Reduction of Esters, Lactones, and Anhydrides	418
IV.	Cathodic Reduction of Amides, Lactams, Imides, and Hydrazides	421
V.	Cathodic Reduction of Nitriles	423
	References	425
Chapter XI. ONIUM COMPOUNDS		429
L. Horner		
I.	Role of the Supporting Electrolyte	429
II.	Reduction Potentials of Ammonium Salts	432
III.	Reduction Potentials of Phosphonium Salts	435
IV.	Reduction Potentials of Quaternary Arsonium Salts	439
V.	Reduction Potentials of Tertiary Sulfonium Salts	440
VI.	Ylid Formation in the Electrolysis of Phosphonium and Sulfonium Salts	440
VII.	Asymmetric Induction by Use of Optically Active Supporting Electrolytes	442
	References	443

SECTION D: SYNTHETIC AND MECHANISTIC ASPECTS
OF ANODIC REACTIONS OF ORGANIC COMPOUNDS
CLASSIFIED BY ELECTROPHORES

Chapter XII. HYDROCARBONS		447
L. Ebersson		
I.	Introduction	447
II.	General Mechanistic Considerations	448
III.	Polarographic Studies.	450
IV.	Follow-up Reactions	457
	References	465
Chapter XIII. CARBOXYLIC ACIDS		469
L. Ebersson		
I.	Introduction	470
II.	Experimental Factors	471
III.	Mechanism of the Kolbe Reaction	477
IV.	Stereochemistry of the Kolbe Reaction	483
V.	Applications of the Kolbe Reaction	485
VI.	Miscellaneous	499
	References	500
Chapter XIV. ANODIC OXIDATION OF AMINES		509
Vernon D. Parker		
I.	Introduction	510
II.	Anodic Oxidation of Aliphatic and Benzyl Amines	510
III.	Oxidation of Amino Alcohols	513

IV.	Oxidation of Amino Acids	514
V.	Oxidation of Aromatic Amines	515
VI.	Oxidation of Amino- and Aminophenylethylenes	525
	References	527
Chapter XV. ANODIC OXIDATION OF OXYGEN-CONTAINING COMPOUNDS		531
Vernon D. Parker		
I.	Introduction	532
II.	Anodic Oxidation of Phenols and Derivatives	532
III.	Anodic Oxidation of Aliphatic Hydroxy Compounds	540
IV.	Anodic oxidation of Ethers	543
V.	Miscellaneous Oxidations	546
	References	547
Chapter XVI. ANODIC OXIDATION OF SULFUR-CONTAINING COMPOUNDS		551
Vernon D. Parker		
I.	Introduction	551
II.	Oxidation of Sulfides and Disulfides	552
III.	Oxidation of Thio Acids	554
IV.	Oxidation of Thioamides and Thioureas	554
V.	Oxidation of Mercaptide, Dithiocarbamate, Trithiocarbonate, and Xanthogenate Salts	555
VI.	Miscellaneous Oxidations	556
VII.	Detectable Cation Radicals	557
	References	557
SECTION E: ELECTROCHEMISTRY OF CERTAIN COMPREHENSIVE CLASSES OF COMPOUNDS		
Chapter XVII. ELECTROLYSIS OF HETEROCYCLIC COMPOUNDS		563
H. Lund		
I.	Introduction	564
II.	Electrolytic Formation of Heterocyclic Systems	564
III.	Electrolytic Reactions of Heterocyclic Systems	582
IV.	Electrolytic Reactions of Substituted Heterocyclic Compounds	599
	References	610
Chapter XVIII. ORGANOMETALLIC SYNTHESSES		621
H. Lehmkuhl		
I.	Introduction	621
II.	Electrochemical Preparation of Organometallic Compounds	622
III.	Electrochemical Transformations of Organometallic Compounds	650
	References	666

SECTION F: ELECTRODE REACTIONS CLASSIFIED
BY REACTION TYPE

Chapter XIX.	ELECTROLYTIC REDUCTIVE COUPLING	679
	Manuel M. Baizer	
I.	Introduction	679
II.	Reductive Coupling Reactions	682
	References	700
Chapter XX.	OXIDATIVE COUPLING	705
	Klas Nyberg	
I.	Introduction	705
II.	Aromatic Compounds	706
III.	Ethylenic Compounds	714
IV.	Oxidation of Organic Anions	718
V.	Sulfur Compounds	725
	References	725
Chapter XXI.	CLEAVAGES	729
	L. Horner and H. Lund	
	Part A: L. Horner	
I.	Onium Compounds	731
II.	Sulfur Compounds (Excluding Sulfonium)	746
III.	Reductive Elimination of Substituents α to Cyano and Carboxyl Compounds	762
IV.	Electrochemical Cleavage of Triphenylphosphine and Its Oxide	762
	Part B: H. Lund	
I.	Introduction	763
II.	Carbon-Carbon Bond	763
III.	Carbon-Oxygen Bond	767
IV.	Carbon-Nitrogen Bond (Excluding Quaternary Ammonium)	768
V.	Carbon-Halogen Bond	770
VI.	Oxygen-Oxygen Bond	770
VII.	Nitrogen-Nitrogen Bond	770
VIII.	Nitrogen-Oxygen Bonds	773
	References	773
Chapter XXII.	ANODIC SUBSTITUTION	781
	L. Ebersson	
I.	Introduction	782
II.	Formation of Carbon-to-Oxygen Bonds	783
III.	Formation of Carbon-to-Sulfur Bonds. Thiocyanation	792
IV.	Formation of Carbon-to-Nitrogen Bonds	792

V.	Formation of Carbon-to-Carbon Bonds	796
VI.	Formation of Carbon-to-Halogen Bonds	798
	References	800

SECTION G: INDIRECT ELECTRO-OXIDATION AND REDUCTION

Chapter XXIII.	AMALGAM REDUCTIONS	805
	Henning Lund	
I.	Introduction	805
II.	Olefinic Compounds	806
III.	Halogen Compounds	811
IV.	Nitro Compounds and Derivatives	811
V.	Carbonyl Compounds and Derivatives	812
VI.	Acids and Derivatives	813
VII.	Reduction of Phenolic Compounds	814
VIII.	Cleavage Reactions (Other Than Carbon-Halogen)	815
IX.	Polymerization Reactions	816
	References	816
Chapter XXIV.	ELECTROGENERATED REAGENTS	821
	Roy Dietz and Henning Lund	
I.	Introduction	822
II.	Halogen	822
III.	Inorganic Mediators	824
IV.	Organic Mediators	828
V.	Hydrogen	828
VI.	Novel Electrogenerated Reagents	831
	References	834
Chapter XXV.	USE OF THE SOLVATED ELECTRON	839
	H. Lund	
I.	Introduction	839
II.	Reduction in Proton-Rich Medium	842
III.	Reductions in Amine Media	845
	References	849

SECTION H: (HETEROGENEOUS) ORGANIC ELECTRO- CHEMISTRY VIS-A-VIS HOMOGENEOUS ORGANIC CHEMISTRY

Chapter XXVI.	COMPARISON BETWEEN ELECTROCHEMICAL AND ANALOGOUS CHEMICAL REACTIONS	855
	L. Ebersson	
I.	Introduction	856
II.	Anodic Processes	860

III.	Cathodic Processes	864
IV.	Conclusions	866
	References	866
Chapter XXVII.	STEREOCHEMISTRY OF ORGANIC ELECTRODE PROCESSES	869
	L. Ebersson and L. Horner	
	Part A: L. Ebersson	
I.	Introduction	870
II.	Role of Adsorption for Orientation of Substrate Molecules	871
III.	Additions to Multiple Bonds	874
IV.	Substitution Reactions	884
V.	Coupling, Cleavage, and Elimination Reactions	891
	Part B: L. Horner	
VI.	Asymmetric Induction by Use of Optically Active Supporting Electrolytes	895
	References	900
	SECTION I: PRESENT AND FUTURE APPLICATIONS OF ORGANIC ELECTROCHEMISTRY	
Chapter XXVIII.	INDUSTRIAL ELECTROORGANIC CHEMISTRY	907
	D. Danly	
I.	Introduction	907
II.	Cell Design	909
III.	Industrial Electroorganic Processes	933
	References	943
Chapter XXIX.	ELECTROCHEMICAL POLYMERIZATION	947
	G. Parravano	
I.	Introduction	948
II.	Reaction Characteristics	948
III.	Chemical and Electrochemical Steps in ECP	951
IV.	Electrode Processes	963
V.	Experimental Results	968
VI.	Conclusion	970
	References	971
Chapter XXX.	ORGANIC ELECTROCATALYSIS	975
	Manuel M. Baizer	
	References	977

Appendix I.	CLASSIFIED BIBLIOGRAPHY	979
	G. Cauquis and D. Serve	
I.	Books	979
II.	Advances and Annual Surveys	980
III.	Journals	981
IV.	Proceedings of Congress and Special Issues of Journals	983
V.	Reviews	984
VI.	Abstracting Services and Bibliographies	987
Appendix II.	SPECIALIZED EQUIPMENT	989
	P. Iversen	
AUTHOR INDEX	993
SUBJECT INDEX	1049
