

CONTENTS

1. General Principles	1
1.1 Definition of an Intermediate	1
1.2 Kinetics of Reactions Involving Intermediates,	3
1.3 Estimation of Thermochemical Properties	4
1.4 resonance	9
1.5 Hammond Postulate and Bell-Evans-Polanyi Principle	10
1.6 The Reactivity-Selectivity Principle	12
1.7 Frontier Molecular Orbital Theory	14
References and Notes,	21
2. Radicals	23
2.1 Reactivity and Staility	23
2.2 Detection of Radicals and Structure Determination	36
2.3 Geometry and Rate of formation	62
2.4 Formation of Radicals	62
2.5 General Types of Reaction	87
2.6 Electron Transfer and Radical Ions	109
2.7 Examples and Problems	118
References and Notes,	122
3. Diradicals	128
3.1 Trimethylenes,	128
3.2 Diradicals and Thermochemistry	136
3.3 Pyrazolines	139
3.4 2,3-Diazabicyclo[2.2.1]hept-2-ene,	142
3.5 Allowed and Forbidden Cycloreversions	144
3.6 1,4-Diradicals	148
3.7 Higher Diradicals.	155
3.8 Problems	158
References	159
4. Carbenes and Nitrenes	162
4.1 Electronic Structure and Energetics	162
4.2 Generation	167
4.3 Direct Observation	172
4.4 Reaction Types	177
4.5 Cemical Activation	225
4.6 Structure and Reactivity	230

4.7 Carbene Analogs	244
4.8 Problems,	250
References and Notes	254
5. Strained Rings	265
5.1 Strain in General	265
5.2 Twisted Bridgehead Olefins	271
5.3 cis-Bent Olefins	277
5.4 Cycloalkynes and Cyclic Allenes	280
5.5 Benzyne	288
5.6 Strained σ -Bonds	296
5.7 Problems	302
References and Notes	305
6. Antiaromatics	309
6.1 Electronic Structure	309
6.2 Synthesis and Structure of Cyclobutadienes	313
6.3 Problems	322
References	324
Index	327
