

Contents—Volume IV

Editor's Preface to Volume I	vii
Editor's Note to Volume IV	x
XLVII. Reactions of Ethers and Cyclic Ethers by <i>Francis Johnson</i>	1
I. Introduction	1
II. The Cleavage of Ethers by Lewis Acid Halides	1
1. Aliphatic Ethers	2
2. Alkyl Aryl and Diaryl Ethers	5
3. Cyclic Ethers	7
A. 1,2-Epoxyalkanes	7
B. 1,3-Epoxyalkanes	8
C. 1,4- and 1,5-Epoxyalkanes	8
4. Mechanism of Ether Cleavage.	9
III. The Cleavage of Ethers in the Presence of Lewis Acids and a Third Reactant	12
1. Acylation of Ethers	12
A. With Organic Acid Halides	12
B. With Organic Acid Anhydrides.	16
C. Mechanism	18
2. Alkylation with Ethers	20
A. The Alkylation of Aliphatic Compounds	20
B. The Alkylation of Aromatic Compounds	22
C. The Rearrangement of Alkyl Aryl Ethers: Self- alkylation	25
3. The Reactions of 1,2-Epoxyalkanes with Carbonyl Compounds: Dioxolane Formation	30
4. Miscellaneous Cleavage Reactions	31
IV. Rearrangement Reactions of Cyclic Ethers	32
1. 1,2-Epoxyalkanes	33
2. Other Cyclic Ethers	41
V. The Alkylation of Ethers: Trialkyloxonium Salts	42
VI. The Polymerization of Cyclic Ethers	45
1. 1,2-Epoxyalkanes	46
2. 1,3-Epoxyalkanes	55
3. 1,4-Epoxyalkanes	58
VII. Tables	61-99
XLVIII. Reactions of Aromatics with Lewis Acid Metal Halides by <i>Peter Kovacic</i>	111
I. Introduction	111
II. Ferric Chloride and Antimony Pentachloride	111
1. Chlorination	111

2.	With Alkylbenzenes	114
	A. Monoalkylbenzenes	114
	B. Xylenes	115
	C. Mesitylene and Pentamethylbenzene	117
3.	With Phenols	117
4.	With Deactivated Benzenes	118
5.	With Pyridine	118
6.	Oxidative Cationic Polymerization of Benzene	119
III.	Cupric Halides	121
IV.	Phosphorus Pentachloride	121
V.	Plumbic Chloride and Stannic Chloride	122
VI.	Aluminum Halides	122
VII.	Mercuric Chloride, Tellurium Tetrahalides, Boron Trihalides, Phosphorus Trichloride, Niobium Pentachloride, Tantalum Pentachloride, and Arsenic Trichloride	122
XLIX.	Reactions of Non-benzenoid Aromatics by K. Hafner and K. L. Moritz	127
I.	Introduction	127
II.	Alkylation	127
	1. Introduction of Alkyl Groups	127
	A. Ferrocenes	127
	B. Fulvenes	131
	C. Azulenes	132
	D. Pseudo-azulenes	134
	E. Pentalene and Heptalene Derivatives	135
	F. Indolizines and Cyclazines	135
	G. Other Non-benzenoid Aromatic Systems	136
	2. Chloromethylation	136
	A. Azulenes	136
	B. Other Non-benzenoid Aromatic Systems	137
	3. Hydroxymethylation	137
	A. Ferrocenes	137
	B. Tropolones	139
	C. Azulenes	139
	4. Aminomethylation	140
	A. Ferrocenes	140
	B. Tropolones	141
	C. Azulenes	142
	D. Other Non-benzenoid Aromatic Systems	144
III.	Acylation	144
	1. Preparation of Aldehydes	144
	A. Ferrocenes	144
	B. Fulvenes	145
	C. Azulenes	148
	D. Pseudo-azulenes	150
	E. Heptalene Derivatives	151
	F. Indolizines and Cyclazines	151

2.	Preparation of Ketones	151
A.	Ferrocenes	151
B.	Azulenes	157
C.	Pseudo-azulenes	160
D.	Indolizines and Cyclazines	160
3.	Preparation of Carboxylic Acid Derivatives	160
A.	Ferrocenes	160
B.	Azulenes	161
C.	Pseudo-azulenes	163
D.	Indolizines and Cyclazines	164
IV.	Nitrosation	164
1.	Fulvenes	164
2.	Tropolones	164
3.	Azulenes	165
V.	Nitration	166
1.	Tropolones	166
2.	Azulenes	167
3.	Pseudo-azulenes	168
4.	Pentalene and Heptalene Derivatives	168
5.	Indolizines and Cyclazines	169
VI.	Sulfonation	169
1.	Ferrocenes	169
2.	Tropolones	169
3.	Azulenes	170
MI.	Halogenation	170
1.	Ferrocenes	170
2.	Fulvenes	171
3.	Tropones and Tropolones	173
4.	Azulenes	174
5.	Pseudo-azulenes '	176
L.	Reactions with Organometallic Compounds by <i>Glen A. Russell</i>	185
I.	Reaction between Friedel-Crafts Catalysts and Organometallic Reagents	185
II.	Reactions of Organometallic Reagents Catalyzed by Metal Halides	189
1.	Redistribution Reactions not Involving Metal-Carbon Bonds	190
2.	Redistribution Reactions Involving Metal-Carbon Bonds	193
III.	Other Metal Halide Catalyzed Reactions of the Organometallics	196
IV.	The Mechanism of the Metal Halide Catalyzed Reactions	198
LI.	Reactions in Organophosphorus Chemistry by <i>G. M. Koeolapoff</i>	213
I.	Introduction	213
II.	Reactions of Aromatic Compounds	213

III.	Reactions with Aliphatic Compounds	228
IV.	Conclusion	233
LII.	Reactions in Carbohydrate Chemistry by <i>Adolf Wagner</i>	235
I.	Introduction	236
II.	Reactions with Unsubstituted Carbohydrates	236
III.	Reactions with Substituted Carbohydrates	247
LIII.	Reactions with Metathetic Cation-forming Salts by <i>George A. Olah and Harold W. Quinn</i>	255
I.	Introduction	255
II.	Silver Perchlorate. . . .	256
1.	Preparation and Properties	256
2.	"Catalytic" Properties	257
3.	Metathetic Reactions	259
A.	Acylation	259
B.	Alkylation	260
C.	Halogenation	263
III.	Sodium Perchlorate	267
IV.	Mercuric Perchlorate	267
V.	Magnesium Perchlorate	268
VI.	Silver Orthophosphate (and Related Zn, Cd, Sn, Pb, and Al Phosphates). . . .	270
VII.	Silver Tetrafluoroborate. . . .	272
1.	Preparation and Properties	272
2.	Metathetic Reactions	274
VIII.	Copper(I) Tetrafluoroborate	276
IX.	Mercuric Tetrafluoroborate	276
X.	Sodium and Ammonium Tetrafluoroborate	276
XI.	Silver Hexafluorophosphate, Silver Hexafluoroarsenate , and Silver Hexafluoroantimonate	280
1.	Preparation and Properties	280
2.	Metathetic Reactions	281
XII.	Silver Trifluoroacetate	283
XIII.	Silver Sulfate	285
XIV.	Silver Fluorosulfonate, Hexafluoronioate, Hexafluorotantalate , and Fluorotitanates	285
LIV.	Practical Applications and Future Outlook by <i>George A. Olah</i>	291
I.	Introduction	291
II.	Early Development	292
1.	First Applications	292
2.	Production of Aluminum Chloride	293

III. Development Prior to World War I and between the two World Wars	294
IV. Fields of Present-day Applications	295
1. Petroleum and Petrochemical Industry	295
A. Cracking, Refining, and Additives	295
B. Polymerization	298
C. Alkylation and Isomerization	299
D. Catalytic Reforming and Aromatization	301
E. Hydrodealkylation	302
F. Anti-knock Compounds	303
2. Surface-active Agents (Detergents)	303
3. Agricultural Chemicals and Insecticides	306
4. Elastomers, Plastics, and Plasticizers	307
5. Dye Intermediates	308
6. Aromatic Intermediates	311
7. Pharmaceuticals and Cosmetics	312
8. Halogenated Solvents	314
V. Characteristic Production Figures	315
1. Aluminum Chloride	315
2. Representative Organic Chemicals	316
VI. Conclusions and Future Outlook	317
