

## CONTENTS

<b>PREFACE</b>	xi
<b>INTRODUCTION</b>	1
CHAPTER 1. HISTORY	3
Literature Cited	15
CHAPTER 2. PREPARATION AND PROPERTIES OF PERIODATES	17
Preparation	17
Solubility	19
stability-of Aqueous Solutions	20
Standard Potentials	20
Ionization of Periodic Acid	21
Structure of Periodates	22
Literature Cited	23
CHAPTER 3. MECHANISM OF PERIODATE OXIDATION	24
<b>1,2-Diols</b>	24
Kinetics of Periodate Oxidation	25
Further Evidence for a Cyclic Intermediate	35
Alternative Mechanisms	41
Conclusions	42
<b>1,2-Hydroxycarbonyl Compounds and 1,2-Diketones</b>	43
<b>1,2-Aminoalcohols</b>	45
Active Methylene Groups	49
Literature Cited	52
CHAPTER 4. ANOMALOUS PERIODATE OXIDATIONS	55
Overoxidation	55
Sulfur-containing Compounds	61
Phenols	64
Flavanols	66
Amines	67
<b>Amino Acids</b>	68
Unsaturated Sugars	71
Amino Sugars	71
Proteins	72
Oxidations at Elevated Temperature	72

Oxidations in the Presence of Light	72
Literature Cited	73
CHAPTER 5. PERIODATE OXIDATION IN STRUCTURAL STUDIES	75
Structure Assignment based on Periodate Oxidation Information	75
Structure Assignment based on Periodate Oxidation and Other Information	82
Structure and End-group Assay of <b>Polysaccharides</b>	94
Nature of the Product of Periodate Oxidation	110
Literature Cited	112
CHAPTER 6. ANALYTICAL METHODS	116
Conditions of the Oxidation	116
Solvent	116
Oxidant	117
Temperature	117
Light	117
Concentration of Reactants	117
Duration of Reaction	118
<b>pH</b>	118
Buffer Composition	119
Determination of Oxidant Consumption	120
Müller–Friedberger Method	120
<b>Fleury–Lange</b> Method	121
Malaprade Method	121
Discussion of Iodometric Methods	122
Determination of $\alpha$ -Glycerophosphates in the Presence of <b><math>\beta</math>-Glycerophosphates</b>	123
Other Methods for Periodate Determination	124
Spectrophotometric	124
Ion Exchange	125
Polarographic	126
H-Acid	126
Determination of Glycerol	127
Determination of Acid Produced	127
Formic Acid	127
Titration with Alkali	127
<b>Determination</b> of Simple Sugars	128
<b>Influence</b> of Overoxidation	129
Procedure for Minimizing Overoxidation	130
Procedure for Determination of Formic Acid and <b>Formate</b> Ester	131
Potentiometric Titration	131
Iodometric	132
Removal of Formic Acid from Solution before Titration	133
Gasometric	133

Spectrophotometric	134
Mercuric Chloride	135
Determination of Other Acids	135
<b>Glyoxylic Acid</b>	136
Carbonyl Acids	137
Determination of Formaldehyde	139
Mercuric Chloride	139
<b>Dimedone</b>	139
Chromotropic Acid	141
Phenylhydrazine–Potassium <b>Ferricyanide</b>	144
Acetylacetone	145
Fluorimetric	146
Determination of Acetaldehyde	147
Iodometric	147
Methyl Pentoses in the Presence of Hexoses	148
Spectrophotometric	149
Determination of Carbonyl Compounds with <b>2,4-Dinitrophenyl-</b> hydrazine	150
Determination of Ammonia and <b>Amines</b>	151
Determination of Carbon Dioxide	153
Recommended General Methods	154
Oxidation of some Dihydroxy Aminoalkanes	154
Oxidation of Maltotetraose	155
Determination of Mixtures of Glycerol, Ethylene Glycol and <b>1,2-Propylene Glycol</b>	156
Oxidation on the Microgram Scale	157
Periodate Oxidation of Borohydride-reduced Oligosaccharides	159
Polarographic Determination of Ethylene Glycol and <b>1,2-Propylene</b> Glycol	162
Conclusions	165
Literature Cited	165
 CHAPTER 7. SYNTHETIC AND OTHER APPLICATIONS OF PERIODATE	
OXIDATIONS	169
Literature Cited	176
 <b>AUTHOR INDEX</b>	 179
 <b>SUBJECT INDEX</b>	 185
