

CONTENTS

58. Ozone Chemistry of Organic Compounds	1
59. The Reaction Between Ozone and Saturated Compounds	4
60. The Mechanism of Alkane Oxidation by Ozone	15
61. Substituent Effects in the Oxidative Cleavage of Organosilanes by Ozone	26
62. Cross Ozonides from Pairs of Symmetrical Olefins	32
63. Evidence for a New Mechanism of Ozonolysis	46
64. Ozonation of Amines	58
65. Ozonation of Polycyclic Aromatics. XV. Carcinogenicity and K-and/or L-Region Additivity towards Ozone	65
66. Comments on the Mechanism of Ozone Rate Action with Hydrocarbons and Alcohols	74
67. Type II Photosensitized Oxygenation Reactions	78
68. Chemistry of Singlet Oxygen. V. Reactivity and Kinetic Characterization	102
69. Photo-Oxygenation of Mono-Olefins. Reaction Steps Involving the Olefin	118
70. Relaxation and Reactivity of Singlet Oxygen	133
71. Generation and Reactions of $1\Sigma_g+1\Delta_g$ Oxygen Molecules in Sensitized Photo-Oxygenations	143
72. Biochemical Oxidations	170
73. The mechanism of Action of Dopamine β -Hydroxylase	172
74. Reaction Mechanism of FAD-Containing Monooxygenases	177
75. Oxidation of Iron(II) Chloride in Nonaqueous Solvents	186
76. Spectral Characteristics and Autoxidation of Hematin α -Globin and Polyhistidine	208
77. The Role of Cytochrome P-450 in Mixed-Function Oxidations	220
78. The Role of Heme in the Tryptophan Pyrrolase Reaction	235
79. Role of Iron in Dioxygenase Reactions	242
80. A New Ring Cleavage Enzyme 2,3-Dihydroxybenzoate Oxygenase	252
81. hydroxylation of Aromatic Compounds Induced by the Activation of Oxygen	260
82. Intramolecular Migrations during Hydroxylation of Aromatic Compounds The NIH Shift	279
83. Analysis of the O ₂ Reduction Process by the Peroxidase System	290
Index	307
