<b>Preface</b>	<b>viii</b>
<b>1 Preliminary survey</b>	<b>1</b>
1.1 The purpose of characterization	1
1.2 Molecular architecture	3
1.3 Crystallizing polymers	3
1.4 Survey of characterization techniques	6
<b>2 Molecular weight determination</b>	<b>10</b>
2.1 Introduction	10
2.2 Primary methods	12
2.3 Secondary methods	26
2.4 Conclusions	35
<b>3 Introduction to spectroscopic techniques</b>	<b>38</b>
3.1 General remarks	38
3.2 Strategy in spectroscopy studies	39
3.3 Energy level calculations	39
3.4 Properties of electromagnetic radiation	40
3.5 Double beam optics	41
<b>4 Ultraviolet-visible spectroscopy</b>	<b>43</b>
4.1 Introduction	43
4.2 Instrumentation	44
4.3 Theoretical estimation of electronic levels	45
4.4 Application to polymers	48
<b>5 Vibrational spectroscopy: infra-red and Raman spectroscopy</b>	<b>50</b>
5.1 Fundamentals of vibrational spectroscopy	50
5.2 Experimental techniques	55
5.3 Applications to polymers	64
5.4 Conclusions	84

<b>6</b>	<b>Nuclear magnetic resonance spectroscopy</b>	<b>85</b>
6.1	Introduction	85
6.2	Principles of magnetic resonance	86
6.3	Experimental techniques	94
6.4	Applications of NMR to polymers	100
6.5	NMR of polymers in the solid state	111
6.6	Two dimensional NMR	116
6.7	Conclusions	117
<b>7</b>	<b>Electron spin resonance spectroscopy</b>	<b>119</b>
7.1	Introduction	1
7.2	Basic theory	120
7.3	Experimental considerations	132
7.4	Polymerization studies	136
7.5	Radiation effects	140
7.6	Mechanical degradation	149
7.7	Thermal degradation	150
7.8	Relaxation studies	150
7.9	Conclusions	151
<b>8</b>	<b>X-ray diffraction</b>	<b>154</b>
8.1	Introduction	154
8.2	Generation and properties of X-rays	154
8.3	Diffraction theory	155
8.4	Practical aspects	169
8.5	Applications to polymer characterization	175
8.6	Conclusions	189
<b>9</b>	<b>Transmission electron microscopy and diffraction</b>	<b>191</b>
9.1	Introduction	191
9.2	Layout of the TEM	191
9.3	Resolution limitation	195
9.4	Electron diffraction	197
9.5	Image contrast	201
9.6	Operating conditions and procedures for beam-sensitive materials	214
9.7	Polymer studies in the TEM	217
9.8	Multiple dark field imaging	238
9.9	Scanning transmission electron microscopy (STEM)	238
<b>10</b>	<b>Scanning electron microscopy</b>	<b>242</b>
10.1	Introduction	242
10.2	Design and operation of the SEM	242
10.3	Observation of polymers in the SEM	250

10.4	Examples of SEM applications with polymers	259
10.5	Conclusions	269
<b>11</b>	<b>Light optical techniques</b>	<b>271</b>
11.1	Introduction	271
11.2	Refractive index	271
11.3	Birefringence	272
11.4	Light microscopy	287
11.5	Small angle light scattering	297
<b>12</b>	<b>Thermal analysis</b>	<b>301</b>
12.1	Introduction	301
12.2	Differential thermal analysis and differential scanning calorimetry	302
12.3	Thermomechanical analysis	313
12.4	Thermogravimetric analysis	317
12.5	Dynamic mechanical thermal analysis	318
12.6	Dielectric thermal analysis	324
12.7	Summary	325
<b>13</b>	<b>Other techniques</b>	<b>327</b>
13.1	Density	327
13.2	Electron spectroscopy for chemical applications (ESCA)	330
13.3	Neutron diffraction	335
<b>14</b>	<b>Multiple characterization applications</b>	<b>338</b>
14.1	The structure of a spherulite	339
14.2	Skin-core characterization in moulded polymers	340
14.3	Weathering of polymers	341
14.4	Particular studies	342
14.5	Conclusions	347
	<b>Index</b>	<b>356</b>
