

## Table of Contents

### *Preface*

## **PART I INTRODUCTION 1**

### **Chapter 1 Historical Introduction and Definitions 3**

1-1. Historical Introduction	3
1-2. Definitions	5
1-3. Nomenclature	14
References	15

### **Chapter 2 Physical Properties of Macromolecules 17**

2-1. Secondary Bond Forces	17
2-2. Crystallinity	20
2-3. Steric Configurations of Polymers	24
2-4. First-Order Transition Temperature	30
2-5. Effect of Chemical Composition on Properties	32
2-6. Orientation	34
2-7. Second-Order Transition Temperature	34
2-8. Elasticity	35
2-9. Optical Activity in Polymers	36
References	36

### **Chapter 3 Molecular Weights of Polymers 39**

3-1. Colligative Property Measurement	39
3-2. Ebullioscopy	42
3-3. Cryoscopy	43
3-4. Osmotic Pressure	43
3-5. Isothermal Distillation	45
3-6. Light Scattering	46
3-7. Viscometry	48

3-8.	Ultracentrifugation	50
3-9.	Gel-Permeation Chromatography	50
3-10.	Thermal Gradient–Turbidity Technique	53
	References	54
<b>PART II POLYMERIZATION REACTIONS—MECHANISMS</b>		<b>55</b>
<i>Chapter 4</i>	<b>Addition Polymerization: Mechanism of Free-Radical Polymerization</b>	<b>57</b>
4-1.	Chemistry of Vinyl Polymerization	57
4-2.	Chemical Initiation	58
4-3.	Ultraviolet-Light Initiation	66
4-4.	Inhibition and Retardation	70
4-5.	Effect of Oxygen	71
4-6.	Thermal Polymerization	72
4-7.	Kinetics of Free-Radical Polymerization	72
4-8.	Chain Transfer	75
4-9.	Copolymerization	77
4-10.	Allylic Polymerization	79
	References	80
<i>Chapter 5</i>	<b>Ionic Polymerization</b>	<b>83</b>
5-1.	Chemistry of Nonradical Chain Polymerization	83
5-2.	Cationic Polymerization	84
5-3.	Anionic Polymerization	87
5-4.	Polymerization of Carbonyls	91
5-5.	Polymerization of Oxyranes	95
5-6.	Radical Anion Polymerization	99
5-7.	Copolymerization by Ionic Mechanism	101
5-8.	Intramolecular Hydride-Shift Polymerization	103
5-9.	Polymerization of Tetrahydrofuran	105
5-10.	Electrically Controlled Anionic Polymerizations	107
	References	108
<i>Chapter 6</i>	<b>Polymerization with the Aid of Complex Catalysts</b>	<b>111</b>
6-1.	Ziegler–Natta Catalysts	111
6-2.	Mechanism of Polymerization	114
6-3.	Reduced Metal Oxides on Support Catalysts	123
6-4.	Mechanism of Polymerization	123
6-5.	Alkyl-Promoted Transition-Metal Catalysts	123
6-6.	Organotransition Metal Catalysts	124
6-7.	Polymerization of Polar Monomers	125
6-8.	Alfin Catalysts	125
6-9.	Copolymerization with Ziegler–Natta Catalysts	127
6-10.	Copolymerization with Supported Metal Oxide Catalysts	127
	References	127

<b>Chapter 7</b>	<b>Stereospecific Polymerization</b>	<b>131</b>
7-1.	Steric Control in Free-Radical Polymerization	131
7-2.	Stereospecific Polymerization by Ionic Mechanism	134
7-3.	Steric Control in <b>Cationic</b> Polymerization	135
7-4.	Steric Control in Anionic Polymerization	139
7-5.	Anionic Polymerization of Dienes	142
7-6.	Steric Control with Ziegler–Natta Catalysts	146
7-7.	Stereospecific Polymerization of Cyclic Ethers	149
7-8.	Stereospecific Carbonyl Polymerization	153
	References	154
<b>Chapter 8</b>	<b>Bulk, Solution, Suspension, and Emulsion Polymerization</b>	<b>157</b>
8-1.	Bulk Polymerization	157
8-2.	Solution Polymerization	159
8-3.	Suspension Polymerization	162
8-4.	Emulsion Polymerization	164
8-5.	Inverse Emulsion Polymerization	169
	References	170
<b>PART III</b>	<b>COMMON ADDITION POLYMERS</b>	<b>171</b>
<b>Chapter 9</b>	<b>Macroalkanes</b>	<b>173</b>
9-1.	Polymers from Azoalkanes	173
9-2.	Polyalkanes from Carbon Monoxide	175
9-3.	Polyethylene	175
9-4.	Polypropylene	178
9-5.	Higher Poly- $\alpha$ -olefins	179
9-6.	<b>Cationic</b> Polymerization of <b>Olefins</b>	181
9-7.	Copolymers of <b>Olefins</b>	182
9-8.	Copolymers with Polar Monomers	183
	References	184
<b>Chapter 10</b>	<b>Polymers and Copolymers from Dienes and Polyenes</b>	<b>187</b>
10-1.	Polymers from Butadiene	187
10-2.	Polymers from Isoprene	192
10-3.	Polymers from Chloroprene	194
10-4.	Polymers from Other Dienes	195
10-5.	Polymers from Trienes	197
10-6.	Cyclic Polymerization of Conjugated Dienes	197
10-7.	Copolymers of Conjugated Dienes	199
10-8.	Polymers from Nonconjugated Dienes	201
	References	202

<b>Chapter 11</b>	<b>Styrene and Styrene-Like Polymers and Polyacrylics</b>	<b>205</b>
	11-1. Polystyrene	205
	11-2. Copolymerization of Styrene	210
	11-3. Derivatives of Styrene	210
	11-4. Acrylates and Methacrylates	214
	11-5. Related Acrylic Polymers	219
	References	225
<b>Chapter 12</b>	<b>Halogen-Bearing Addition Polymers and Vinyl Esters and Ethers</b>	<b>227</b>
	12-1. Poly(vinyl chloride)	227
	12-2. Poly(vinylidene chloride)	228
	12-3. Copolymers of Vinyl Chloride and of Vinylidene Chloride	229
	12-4. Polytetrafluoroethylene	230
	12-5. Polychlorotrifluoroethylene	231
	12-6. Poly(vinyl fluoride) and Poly(vinylidene fluoride)	232
	12-7. Miscellaneous Fluorine-Containing Addition Polymers	232
	12-8. Copolymers of Fluorine-Containing Monomers	233
	12-9. Poly(vinyl esters)	233
	12-10. Poly(vinyl alcohol)	235
	12-11. Poly(vinyl acetals)	235
	12-12. Poly(vinyl ethers)	236
	References	236
<b>PART IV</b>	<b>CONDENSATION POLYMERS</b>	<b>239</b>
<b>Chapter 13</b>	<b>Mechanism of Polycondensation Reactions</b>	<b>241</b>
	13-1. Mechanism of Reaction	241
	13-2. Some Elementary Kinetics of Linear Condensation Polymerization	246
	13-3. Three-Dimensional Condensation Polymerization	248
	13-4. Low-Temperature Polycondensations	249
	13-5. Condensation Polymers by an Anhydrous Catalytic Solution Process	251
	References	251
<b>Chapter 14</b>	<b>Polyesters</b>	<b>253</b>
	14-1. Linear Polyesters	253
	14-2. Polycarbonates	263
	14-3. Polysulfonates	264
	14-4. Polyesters from Epoxides and Anhydrides	265
	14-5. Alkyds	266
	References	267
<b>Chapter 15</b>	<b>Polyamides</b>	<b>269</b>
	15-1. Syntheses of Polyamides	269
	15-2. Common Nylons Formed by Lactam Polymerization	277

15-3.	Polyamides from Diamines and Diacids	281
15-4.	Physical Properties of Polyamides	284
15-5.	Copolyamides	287
15-6.	Special Syntheses of Polyamides	288
	References	289
<b>Chapter 16</b>	<b>Polycarbamates, Polyureas, and Polycarbodiimides</b>	<b>291</b>
16-1.	Chemistry of Isocyanates	291
16-2.	Polymer Preparation	298
16-3.	Properties of Polycarbamates	302
16-4.	Copolymers of Urethanes	303
16-5.	Polymerization through the Isocyanate Group	304
	References	305
<b>Chapter 17</b>	<b>Phenoplasts</b>	<b>307</b>
17-1.	Resoles	308
17-2.	Novolacs	315
17-3.	Ammonia- and Amine-Catalyzed Condensations	316
17-4.	Cross-Linking Reactions of Phenoplasts	318
17-5.	Acid Hardening of Resins	321
17-6.	Reactions with Higher Aldehydes	324
17-7.	Reactions with Ketones	325
17-8.	Higher-Molecular-Weight Linear Polymers	326
17-9.	Curing Phenolic Resins with Formals	327
	References	328
<b>Chapter 18</b>	<b>Aminoplasts</b>	<b>331</b>
18-1.	Urea-Formaldehyde Resins	331
18-2.	Melamine-Formaldehyde Resins	335
18-3.	Guanamines	338
18-4.	N,N'-Diallyl Melamine	338
	References	339
<b>Chapter 19</b>	<b>Ladder and Semiladder Polymers</b>	<b>341</b>
19-1.	Polymers with Rigid Backbones	341
19-2.	Polymers with Both Rigid and Flexible Links in the Backbone	358
	References	367
<b>PART V</b>	<b>NATURALLY OCCURRING POLYMERS</b>	<b>369</b>
<b>Chapter 20</b>	<b>Polysaccharides</b>	<b>371</b>
20-1.	Pentosans and Minor Hexosans	372
20-2.	Carbohydrates from Algae	374
20-3.	Chitin	374

20-4. Starches	375
20-5. Cellulose	378
20-6. Synthetic Polysaccharides	384
References	384
<b>Chapter 21 Proteins</b>	<b>387</b>
21-1. Synthesis of Amino Acids	390
21-2. <b>Oligomers</b> (Peptides)	392
21-3. Isolation and Types of Proteins	393
21-4. Structure of Proteins	394
21-5. Configuration of Proteins	394
21-6. Chemical Composition of Proteins	397
21-7. Some More-Prominant Proteins	398
21-8. Denaturation of Proteins	402
21-9. Synthesis of Polypeptides	402
References	405
<b>Chapter 22 Polynucleotides</b>	<b>407</b>
References	413
<b>PART VI REACTIONS OF POLYMERS</b>	<b>415</b>
<b>Chapter 23 Graft and Block Copolymers</b>	<b>417</b>
23-1. Properties of Graft and Block Copolymers	418
23-2. Synthesis of Graft and Block Copolymers	419
References	436
<b>Chapter 24 Reactions of Polymers</b>	<b>439</b>
24-1. Reactivity of Functional Groups in Polymers	439
24-2. <b>Isomerization</b> of Polymers	442
24-3. Halogenation of Unsaturated Macromolecules	443
24-4. <b>Epoxidation</b> of Macromolecules	445
24-5. Substitution Reactions	445
24-6. Nuclear Substitutions of <b>Poly(vinyl)</b> aromatics)	446
24-7. Cross-Linking of Elastomers	447
24-8. Cross-Linking of Epoxy Resins	449
24-9. Miscellaneous Reactions	453
References	453
<b>Chapter 25 Degradation of Polymers</b>	<b>457</b>
25-1. Hydrolytic Degradation	457
25-2. Thermal Degradation	458
25-3. Degradation of Polystyrene	460

25-4.	Decomposition of Polymethacrylates	461
25-5.	Nitrile Polymers	462
25-6.	Poly(vinyl chloride) and Poly(vinylidene chloride)	463
25-7.	Poly(vinyl acetate)	466
25-8.	Polytetrafluoroethylene	466
25-9.	Poly(ethylene terephthalate)	466
25-10.	Degradation of Polyamides	467
25-11.	Oxidative Bulk Degradation	468
25-12.	Ozone Attack	469
25-13.	Degradation by Radiation	469
	References	470
	<i>Author Index</i>	473
	<i>Subject Index</i>	493
