Foreword	iii
Preface	vii
Acknowledgments	ix
1. INTRODUCTORY SURVEY	1
I. The Ceiling Temperature Concept	2
II. Entropy and Free Energy Changes of Polymerization	10
References	25
2. HEAT OF POLYMERIZATION	27
I. General Aspects	27
II. Variations in Heats of Polymerization	29
III. Empirical Estimation of Heat of Polymerization	35
References	37
Appendix	38
3. ANIONIC POLYMERIZATION	45
I. Introduction	45
II. Initiation	46
III. Propagation	48
IV. Ion Pairs and Free Ions	54
References	60
4. CATIONIC POLYMERIZATION	63
I. General Aspects	64
II. Formation of Carbonium Ion	66
III. Initiation of Cationic Polymerization	76

IV. Propagation of Cationic Polymerization	79
V. Chain Transfer and Termination	88
References	88
5. RADICAL POLYMERIZATION	91
I. General Aspects	92
II. Generation of Free Radicals	95
III. Propagation Reaction	100
IV. Interaction of Radicals	105
V. Free Energies of Formation of Polyethylene and Polytetrafluoroethylene	110
References	119
6. POLYCONDENSATION	121
I. General Aspects	121
II. Degree of Polymerization	122
III. Equilibrium Constant	123
IV. Ring Formation in Polycondensation	128
References	129
7. RING-OPENING POLYMERIZATION	131
I. General Aspects	131
II. Homocyclic Compounds	132
III. Heterocyclic Compounds	145
IV. Summary	152
References	152
8. EQUILIBRIUM POLYMERIZATION	153
I. Possible Types of Equilibrium Polymerization	154
II. Some Case Studies of Equilibrium Polymerization	161
III. Transition Phenomena in Equilibrium Polymerization	182
IV. Molecular Weight Distribution	188
V. Thermodynamics of Equilibrium Polymerization	198
References	203
9. COPOLYMERIZATION: PART 1	207
I. The General Theory of Binary Copolymerization	208
II. Degree of Polymerization and Copolymer Composition of Binary Copolymerization System	239
III. Multicomponent Copolymerization	258
References	265

10. COPOLYMERIZATION: PART 2	269
I. Radical Copolymerization	270
II. Ionic Copolymerization	290
III. Other Copolymerizations	298
References	306
11. POLYMER DEGRADATION	311
I. General Aspects	311
II. Ceiling and Decomposition Temperatures	316
III. Energetics of the Depolymerization	318
IV. Entropy Considerations	323
References	324
12. SPECIAL TOPICS	327
I. Stereospecific Polymerization	328
II. Polymerization Under High Pressure	344
III. Polymerization in the Solid State and Orderly Arrayed State	356
References	359
Addendum	363
Author Index	377
Subject Index	393
